

HOW TO GET LIGHTROOM PRESETS TO WORK ON YOUR PHONE

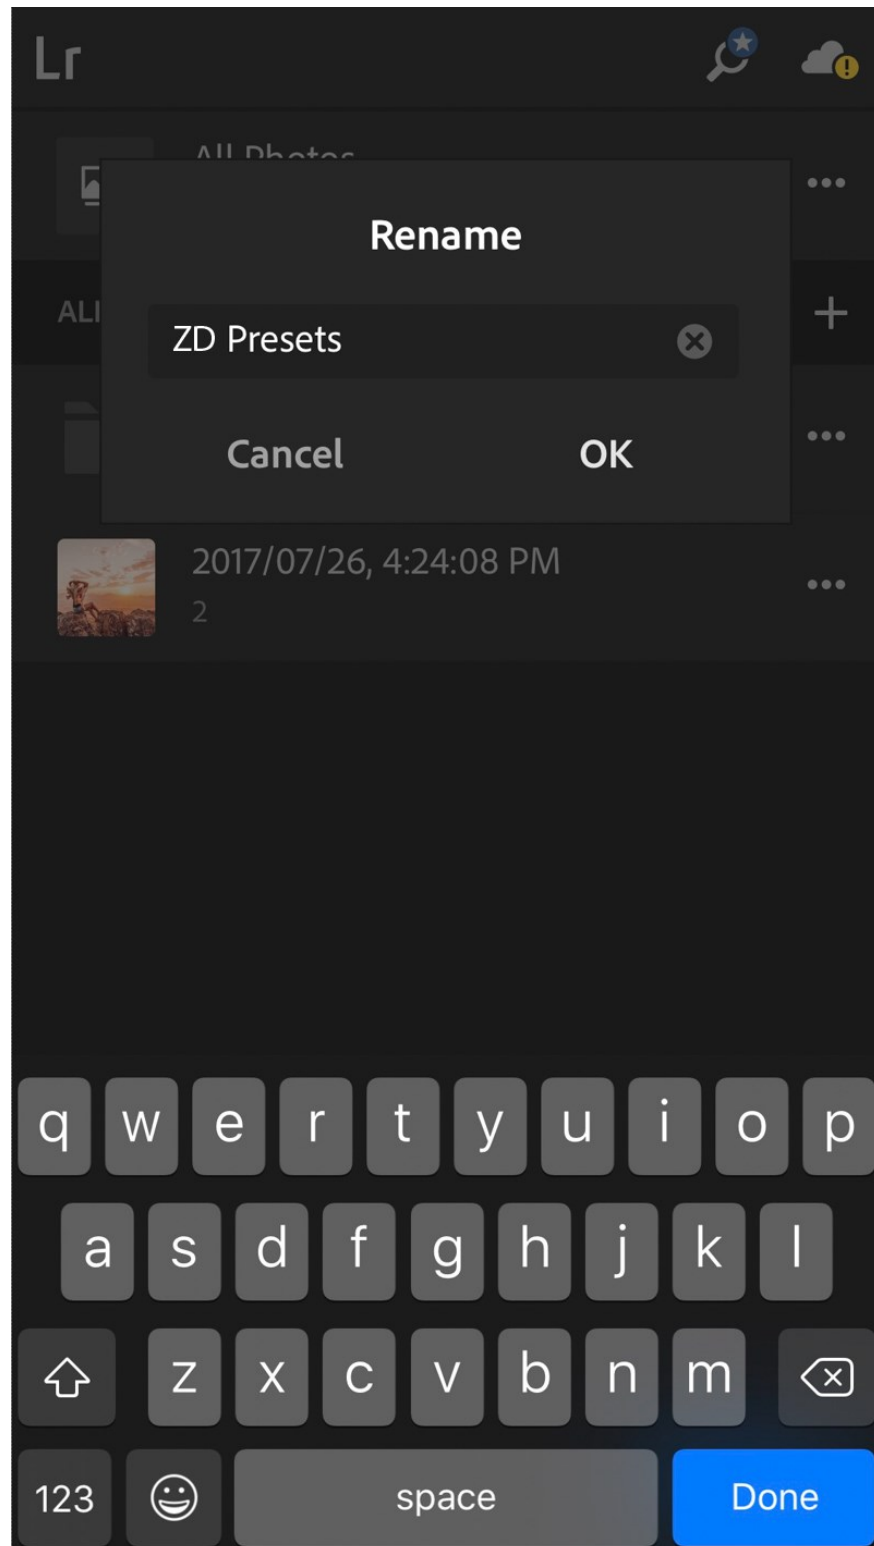

Step 1 – Download Lightroom CC on mobile if you don't have it yet

Go to your app store on your phone and download free Lightroom CC app

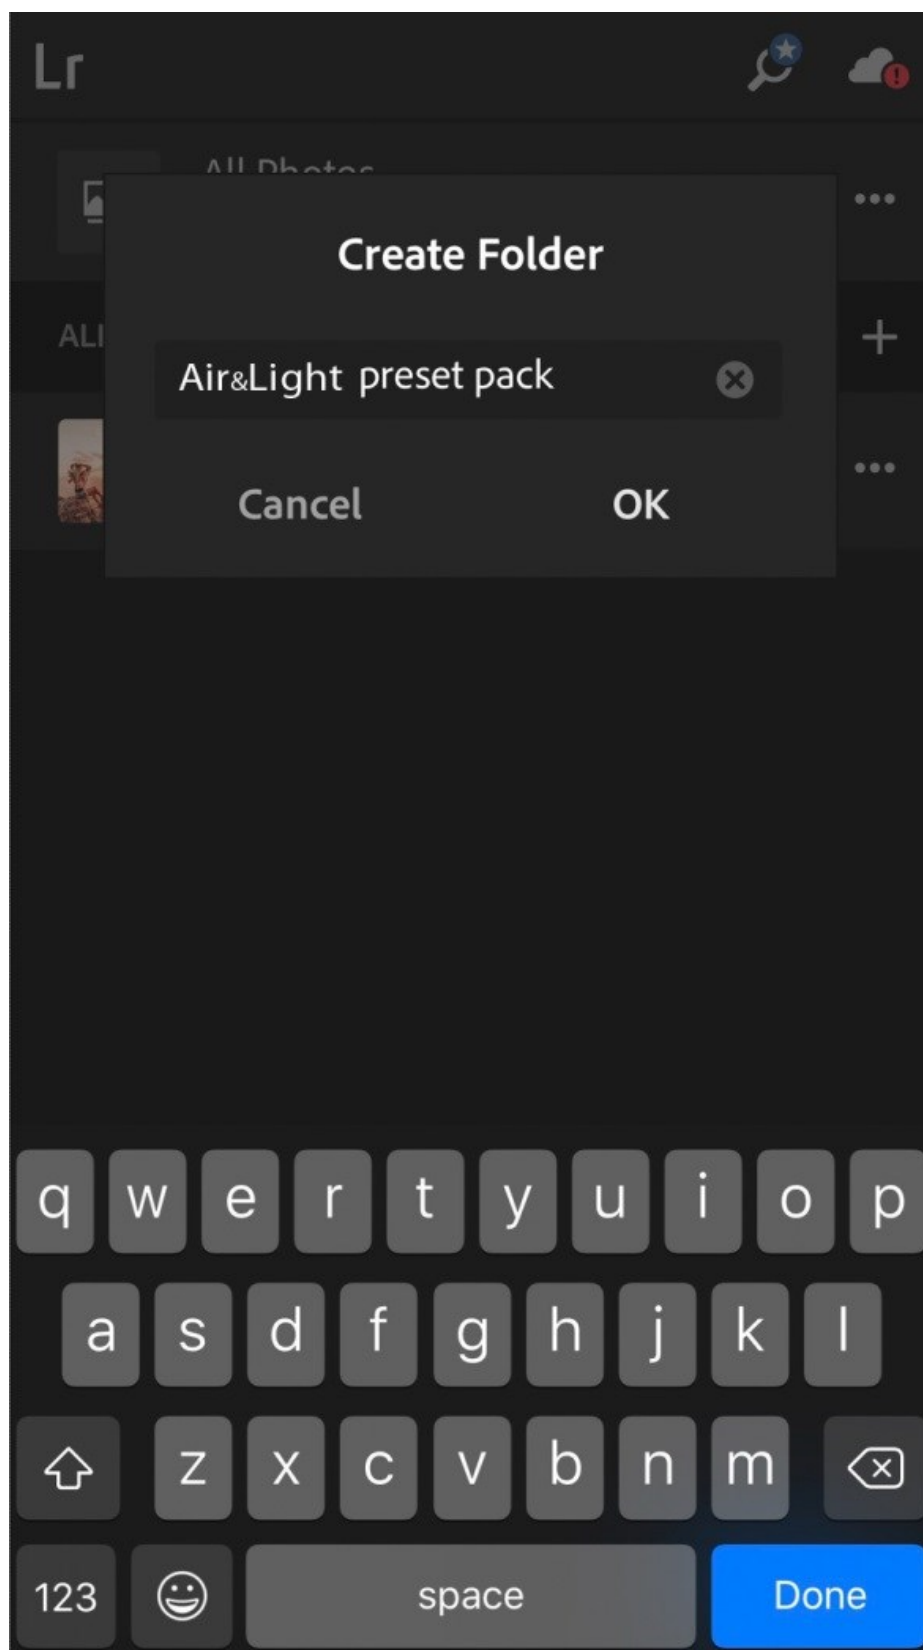

Step 2 – Create a folder called Presets and then an album inside with the specific preset name

Once you have the Lightroom app downloaded and ready, open it up and add a new album. I called my album ZD Presets.

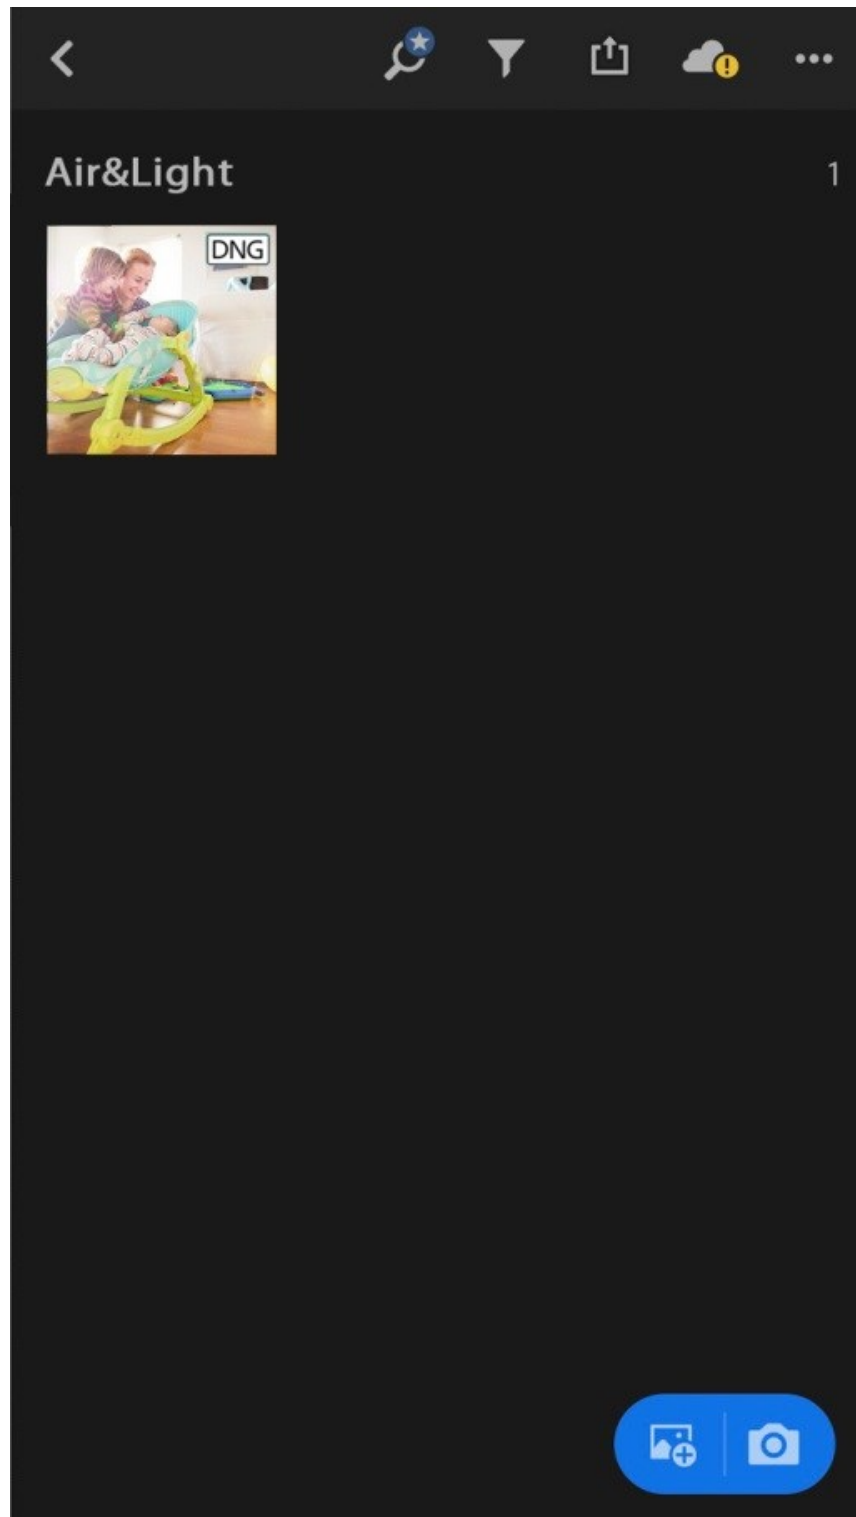

Then add a folder inside the album with the name of your preset pack. I am adding my Air&Light presets first

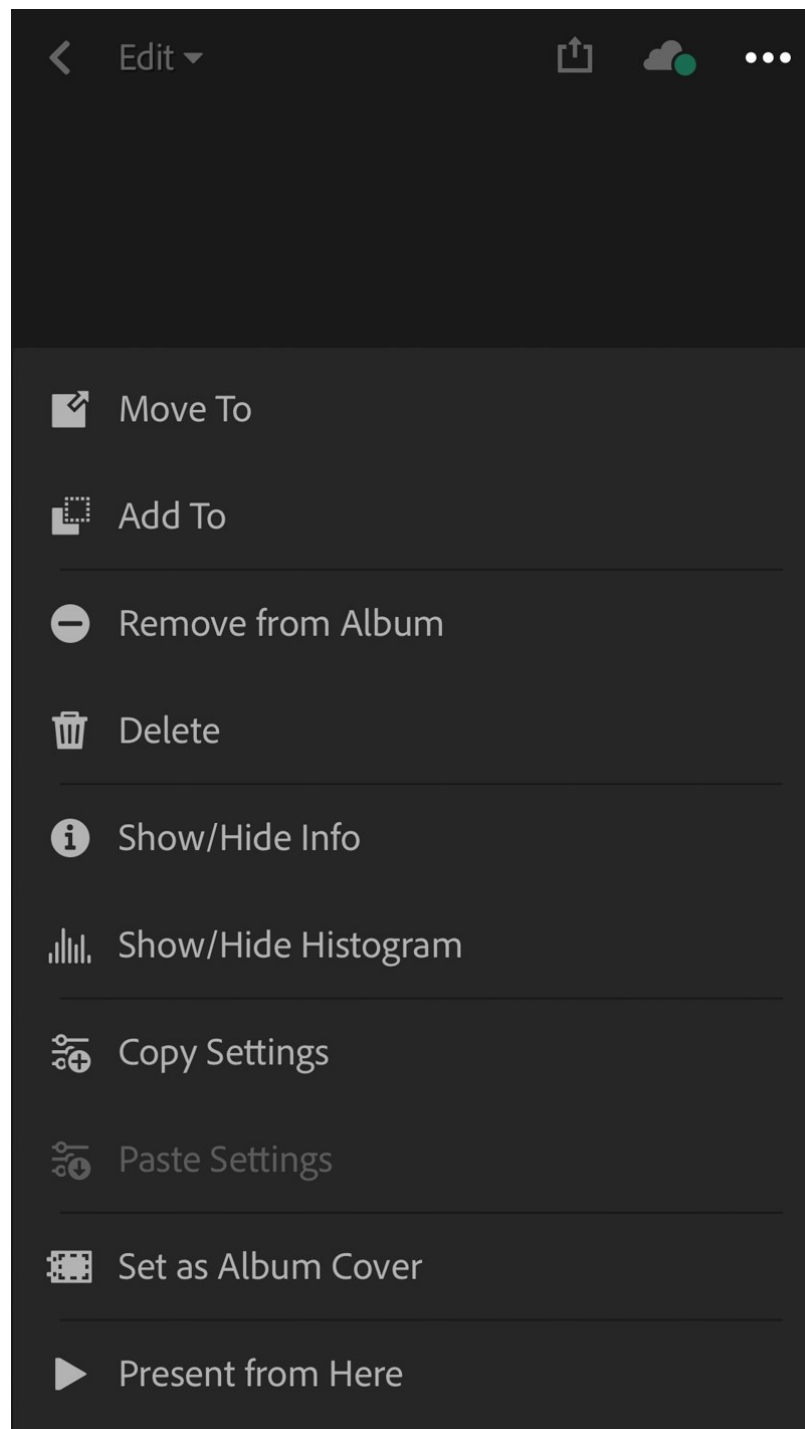

Step 3 – Unzip the preset pack you received after the purchase

If you don't have necessary software on your phone, please, download one of many unarchiving apps from the store. They are free and all equally good!

Step 4 – Import the DNG file into Lightroom CC on your phone and add it to your preset folder

Step 5 – Copy the settings from that photo and paste it onto any other photo that you want the preset on

Present from Here

That's it! Maybe a bit of a hassle when you do it for the first time but after that it's a breeze! <3

Video tutorial on how to upload and use Lightroom Presets on your phone you can find here:
