DESKTOP - LIGHTROOM

INSTALLATION FOR LIGHTROOM 4 - CC 2018:

Lr

1. Download, locate and unpack the ZIP.
2. Open Lightroom and go to Lightroom -> Preferences -> Presets (on Mac) or Edit -> Preferences -> Presets (on Windows).
3. Click on the box: "Show Lightroom Presets Folder" (on Mac) or go to the Presets tab and click "Show Lightroom Presets Folder" (on Windows).
4. In the opened window open "Lightroom" folder and then "Develop Presets" folder.
5. Copy the presets to Develop Presets folder.
6. Restart Lightroom. Your presets will show in the left panel when in Develop mode. Done!

INSTALLATION FOR LIGHTROOM CC 2019 & NEWER:

Lr

With the new CC releases, Adobe transitioned from using .LRTEMPLATE presets to using .XMP, which were previously used for Adobe Camera Raw module of Photoshop. All you have to do is use the corresponding folder from the archive when installing your presets - Lightroom CC 2019.

For the cloud-based Lightroom CC:

1. Download the ZIP file from CM. Unzip the file.
2. In Lightroom, go to the Develop Module and locate the Presets Panel on the left side.
3. Click the «+» Icon on the right side of the panel and select the Import Presets option.
4. Navigate to the location on your computer where you saved the zipped file with the presets, go to the folder «Lightroom CC 2019», select it and click the Import button.
5. You are done. Lightroom locates the presets in the new .XMP format, installs them, and ignores the rest of the files.

Please note, this method only works if you are installing presets in the new .XMP format. If you are trying to install the preset in the legacy .LRTEMPLATE format, you have to manually place the presets into the Develop Setting folder inside the Lightroom installation. In this case, Lightroom would just convert them to XMP automatically.

For the Lightroom CC Classic:

1. Start Lightroom and from the top main menu select Edit > Preferences…
2. If you use Mac you will find the Preferences option under the Lightroom menu.
3. Select the Presets tab inside of the Preferences screen. Make sure the «Store presets with the catalog» setting is unchecked.
4. Click on the button titled, Show All Other Lightroom Presets.
5. Double click on Lightroom folder.
6. Locate Develop Presets folder and open it.
7. Copy the contents of the «Lightroom CC 2019» folder from the downloaded archive.
8. Restart Lightroom.

DESKTOP - PHOTOSHOP

INSTALLATION FOR PHOTOSHOP:

(ACR)

1. Download, locate and unpack the ZIP.
2. Place the preset files (.xmp) in the following location:
Mac*:
(user)/Library/Application Support/Adobe/Camera Raw/Settings
* Depending on your MacOS version, the Library menu may be hidden. To show it, hold the Option key while selecting the "Go" menu in the Finder.
Windows:
(user)\Application Data\Adobe\Camera Raw\Settings
or
C:\Users\(user)\AppData\Roaming\Adobe\Camera Raw\Settings
3. Make sure you only copy the preset files (.xmp) into the "settings" folder specified above (folders are not supported in Camera Raw).

HOW TO USE
ACR PRESETS IN PS:

1. With RAW files, Camera Raw will launch automatically.
2. With JPEGs, one of the ways to open them in Camera Raw is to launch Photoshop, choose Open As..., select Camera Raw from the file types list and then select the file(s) you want to open.
3. Then the usual Camera Raw dialogue will appear in Photoshop. The Presets tab is a next-to-last tab on the right panel.
4. If you've already copied the presets to the Settings folder (see installation), all of them will appear there.
5. If you haven't, just hit the small menu icon (3 lines) in the top right corner of the panel and select "Load Settings". Then browse for the preset to open it from disk. This will load and apply the selected preset, but you'll have to browse for the next one again (so it's better to install all of the presets first).

MOBILE VERSION

In the perfect usage scenario for mobile presets, you need an active Adobe Lightroom CC (or Studio) subscribtion.

This will enable you to import and sync your presets with Desktop and Mobile automatically (this feature is available starting summer 2018 versions and newer). After the sync, your presets will work just as in regular version of Lightroom!

If you are a free user of Lightroom CC for mobile, please use this method:

1. Download .dng presets right from your phone (no dektop required)

using this **LINK**
or
Use .dng presets from the Mobile folder provided in the ZIP.
2. Open the .dng file(s) of the preset(s) in your Lightroom CC app and tap "Copy settings", then open the photo you are working with and hit "Paste settings" to apply the preset. This method will work only for one preset at a time. Please note that this is not a limitation of this preset set, but the only option Adobe currently offers for the free users of its software.
