# MODERN PRESETS

FOR LIGHTROOM

Instructions

MODERN PRESETS
FOR LIGHTROOM

Lightroom CC Mobile app - Installation

01. Download Lightroom CC Mobile app.

02. Now save the preset .DNG files you've received on your camera roll, never mind, you'll see a blank white or black image!

03. Open Lightroom CC Mobile app and add the preset .DNG file to the Lightroom library by clicking the blue icon on the bottom right   and then select your preset .DNG file from your camera roll.

04. To use the preset you have to open the preset .DNG file, copy the settings by clicking on three dots icon menu on the top right   and then select "Copy Settings".

05. Now you have copied all the settings so you can go back to the main library, open the photos that you'd like to edit and select "Paste Settings" from the three dots icon menu on the top right. In this way you've applied your new presets to your image.

06. If you need to further fix your photo you may try to move the settings of white balance and/or exposure.

MODERN PRESETS
FOR LIGHTROOM

I'm a professional photographer and I edit my photos with the presets I create to give an unique mood to my images for my personal website, blog and Instagram.

My presets are really adaptable and that I've tried them on different photos, but please always bear in mind that all of them may look different on every photo just because **every photo is different** because of its exposure, white balance, colors, locations etc. So maybe you'll have to edit them a little bit after the preset is applied.

These presets are for personal and professional use only, not for further distribution, so you're not allowed to share them or sell them (as is or with adjustments).
