MORE DETAILS & HOW TO USE

(This Folder Includes)

1. LIGHTROOM PRESETS

A Lightroom preset is a configuration of settings, designed to achieve a particular look or style of your image. With just one click, your photo can be altered to create the tones you desired. The beauty of using a preset means that your images will look consistent as well as simplifying the editing process, saving you time and effort, you just click and create the style you wanted.

We have divided our presets into two different folders: Effects and Perfections.

Effects: Give your portraits a polished look in just seconds. Increase workflow and retouch your portraits in just seconds with our Portrait Effects Presets. Each Preset has been hand designed to look great with a wide variety of images.

Perfections: Use these presets to create a clean edit, enhance the quality of your photographs, add matte or light HDR effect to make your images pop. Try different genres of lighting, easily make your photo brighter, darker, or sharper. Correct skin tones, Make it smooth and soft, enhance eyes, bright skin, remove noise, highlight and sharp. It would work great for weddings, newborns, children, and portrait photography.

2. LIGHTROOM TOOLKIT

Portrait Workflow Toolkit will equip you with a variety of new tools to help you further refine your portrait images. Quick and useful Lightroom adjustment tools to speed up your editing process with one-click solutions. Use this toolkit if you need to make some minor changes on your images like fixing shadows or adding grain, it will save your time & improve your workflow!

Notes: You can use Lightroom Presets with non-destructive Toolkit presets.
