

How to Install & use our Lightroom Mobile Presets

1. Mobile presets are designed for the free mobile app Lightroom CC - it doesn't require subscription and it's totally free to use. The mobile presets will only work on your phone, *not desktop*.
2. You must have access to a desktop/laptop computer to download these presets .
3. Once downloaded, you'll need to send the files to your phone. The files will be DNG format and show up on your camera roll as blank photos. Don't worry, this is normal.
4. On your phone select the picture with preset you want to use, and then click the 3 “...” dot menu on the top right of the screen and select “Copy Settings”. This will copy the Preset settings to be used on future images.
5. Now that you've got the settings copied, head on back to the main screen of Lightroom mobile, and locate the image you'd like to edit .
6. With the image selected, you'll want to touch the “...” once more, but instead of selecting “Copy Presets”, you'll instead want to select “Paste Settings”. This should “apply” the Preset to your image.
7. From here, you can continue to edit the image until you've got an image with which you're satisfied.

If your photo doesn't look perfect , with a few easy adjustments you will get it to look great! All the photos are often times taken in a different lighting and different time of the day, so the exposure and the temperature of the photo might be different.
