

# PRESETS

HOW TO INSTALL

# HOW TO INSTALL MOBILE LIGHTROOM PRESETS

1. Download and Unzip files into your phone/tablet
2. Open Adobe Lightroom CC Mobile
3. Click on Settings button (top right corner) and choose Add to button (bottom left corner)
4. Choose the location on your phone where you downloaded and unzipped the .dng files
5. Select and Import .dng files into Lightroom
6. Open dng picture in Lightroom
7. Click on Settings (3 dots - top right corner) > Create Preset
8. Write a name and save the preset.

Now you can use the preset on every picture you want.

Just open the picture and look for the preset button on the bottom tab.

# HOW TO INSTALL PRESETS ON PRE-7.3 VERSIONS OF LIGHTROOM

1. Download and Unzip the files, look for the DNG folder.
2. Import the DNG files into the Lightroom Desktop.
3. Select one the pictures **ONE BY ONE** and click on the **PLUS (+)** on the PRESET TAB (DEVELOP MODE) > **CREATE PRESET.**
4. Name the preset and folder as you wish.

This method requires more work but it works with any version of Lightroom.

# HOW TO INSTALL PRESETS & PROFILES ON LIGHTROOM 7.5 OR NEWER

With the new 7.5 release of Lightroom Classic CC, you can now import presets or profiles in a zip file into Lightroom Classic.

1. Navigate to the Develop module in the Lightroom app.
2. Choose **ONE** of the following:
  - a. From the menu bar, choose File > Import Develop Profiles and Presets.
  - b. In the Presets panel, click the plus (+) icon at the upper-right corner and choose Import Presets from the menu. **PLEASE NOTE**, you will only be able to click the plus (+) icon **if you have images loaded in the Develop module.**
3. In the import dialog that appears, **select the downloaded ZIP file**. Please note, this needs to be the original ZIP file. Some browsers will automatically uncompress this ZIP file, but it needs to be intact to install correctly.

That's it! Once you have added the ZIP file, it will automatically extract the presets into the Develop module for you. They will also now be available in Photoshop ACR if you want to use your presets there.

# HOW TO INSTALL ACR PRESETS IN PHOTOSHOP

Please note, if you install the XMP presets/profiles in Lightroom 7.5, they will automatically be installed for ACR as well.

Otherwise, follow these steps to install for ACR only:

**Mac:** Users>YOUR NAME>Library>Application Support>Adobe>Camera Raw>Settings

**Windows:** Application Data>Adobe>Camera Raw>Settings OR C: Users-[user name]>AppData>Roaming>Adobe>Camera Raw>Settings

GLAYSIANNE.COM

Copy and paste the **.xmp presets** into the Settings Folder.

Please note, **only paste the .xmp files (not folders)** into the setting folder, as ACR does not recognize folders.

Please note, if you are using a Mac and cannot locate the Settings folder, try this: go to Finder and select Go > Go to Folder from the menu. Then copy and paste this in the box:

~/Library/Application Support/Adobe/CameraRaw/Settings
