INSTALLATION GUIDE

#1 | INSTALL LIGHTROOM

Install Adobe Lightroom to your mobile device if you don't already have it.

#2 | DOWNLOAD PRESETS

Download the preset pack. It's a .zip file to save space. If it doesn't automatically unzip, here's some quick tips on how to open the .zip pack:

How to unzip on files on iPhone:

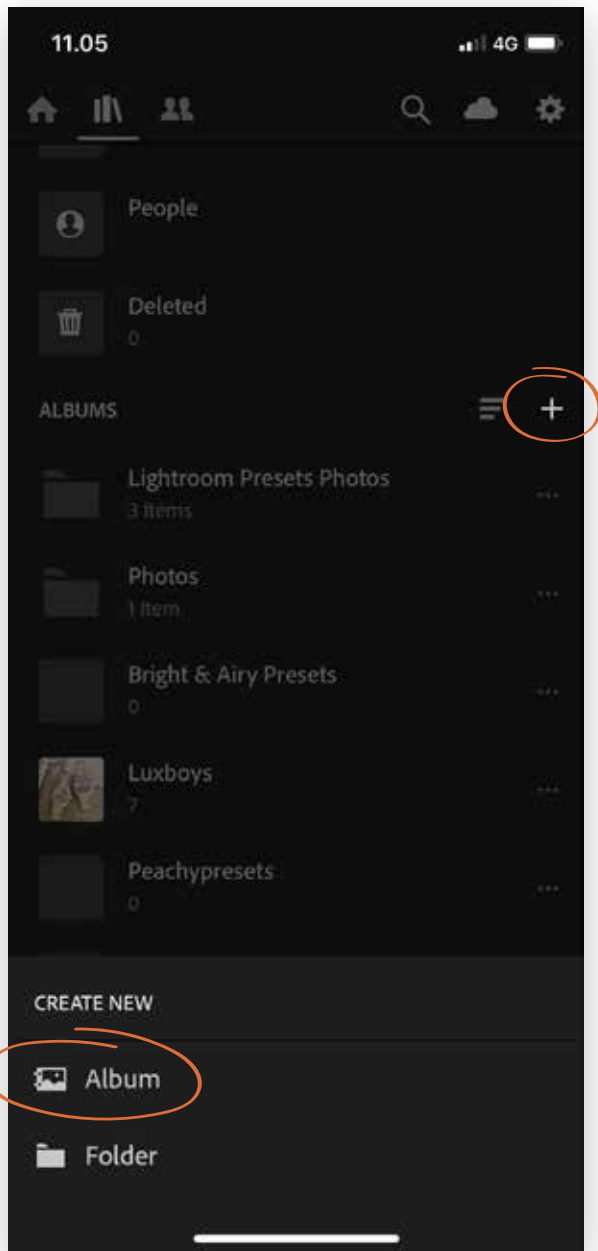

<https://www.google.com/search?q=how+to+unzip+files+on+iphone>

How to unzip on files on Android:

<https://www.google.com/search?q=how+to+unzip+files+on+android>

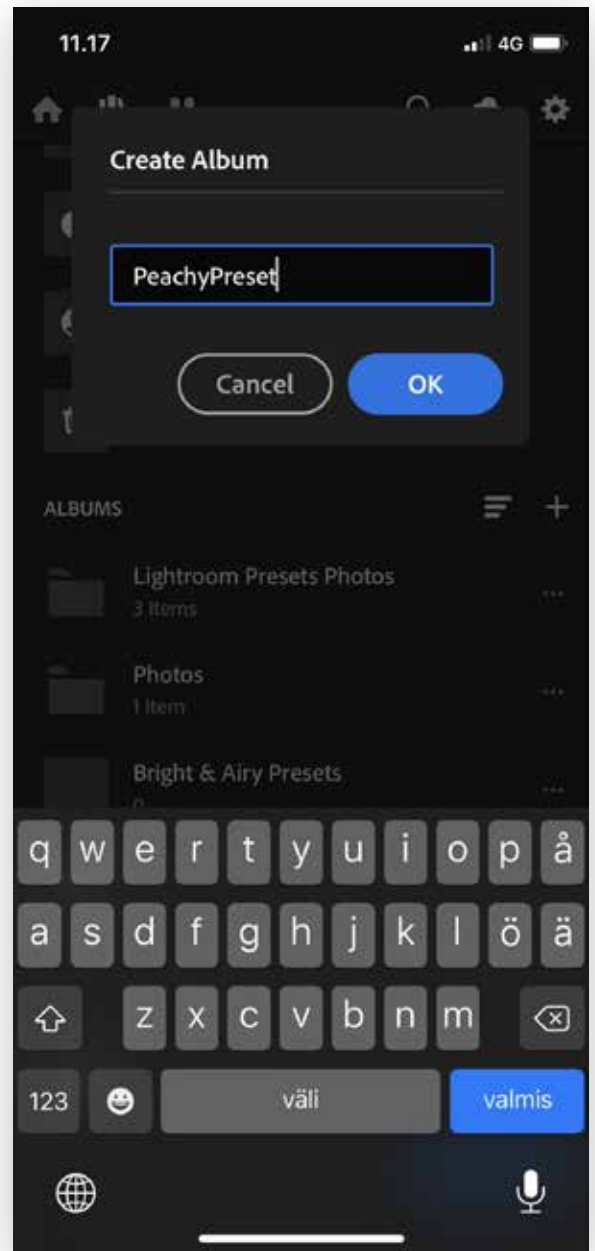

After unzipping, download the DNG files to your photos or files.

#3 | CREATE NEW ALBUM

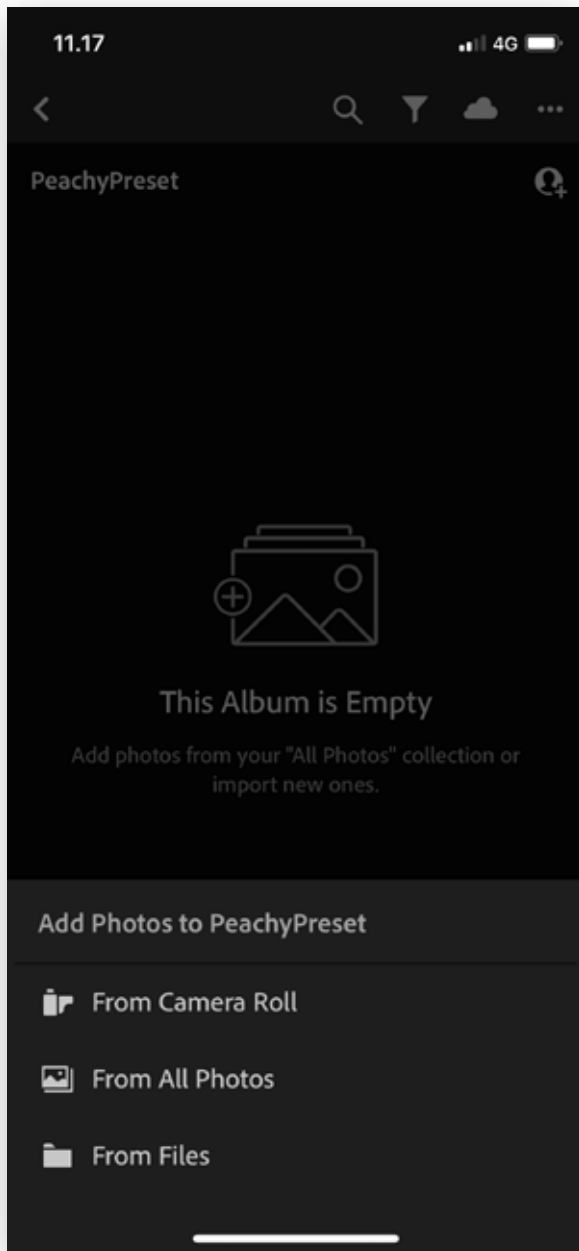

Go to the Adobe Lightroom CC app on your mobile device and create a new album.

#4 | NAME THE ALBUM

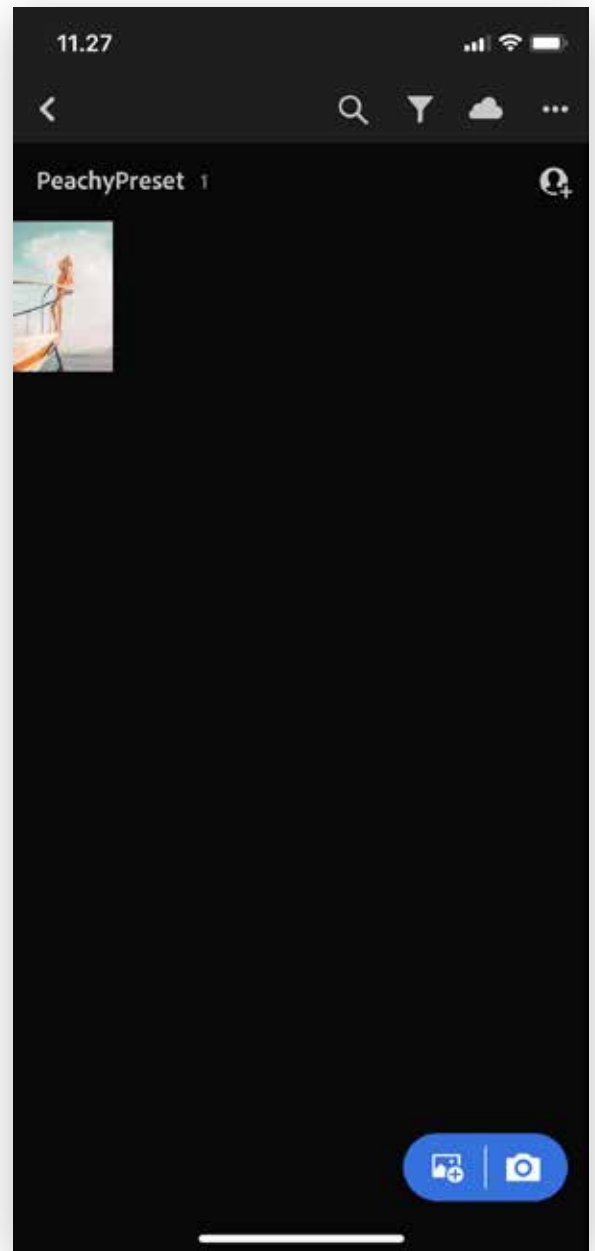

Name it by the pack's name so you'll stay better in control of what you have already installed,

#5 | IMPORT DNG FILES

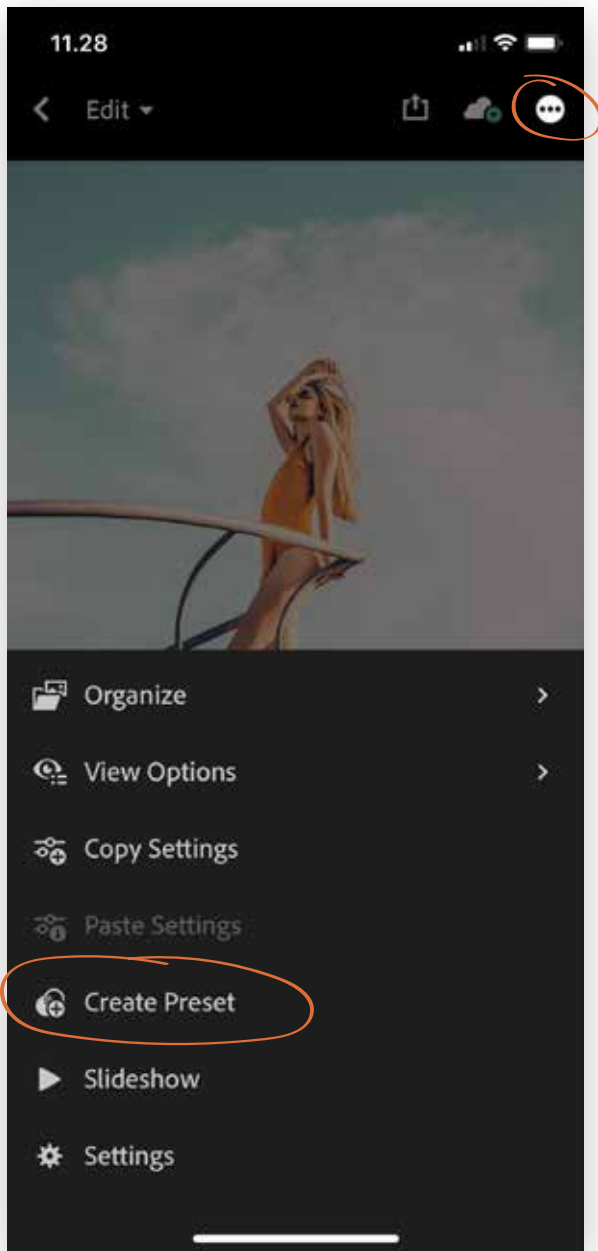

Add DNG files by clicking the image & plus icon. Import the files from either photos library or files. Depending on your device, they should be found on one or another.

#6 | IMPORT ALL TO ALBUM

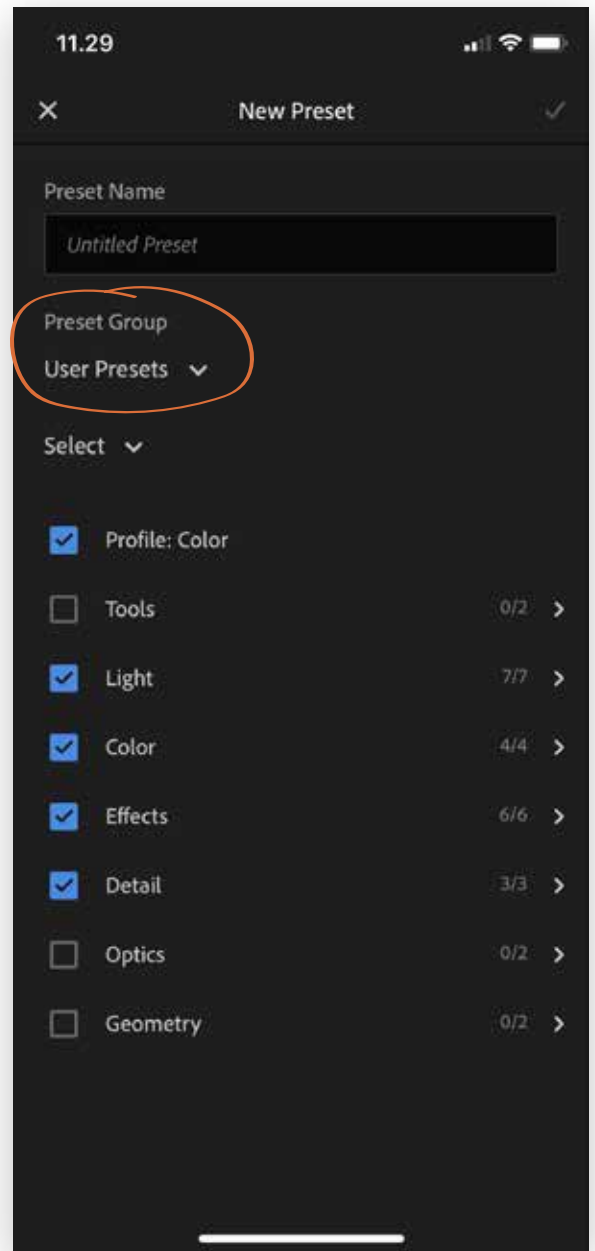

If the pack includes multiple DNG files, add all of them to this folder.

#7 | CREATE PRESETS

Open the DNG files one-by-one and click the three dots on top right corner. Then click Create Preset.

#8 | NAME PRESETS

Give it a name and create a new preset group on Preset Group. Give this group the pack's name.

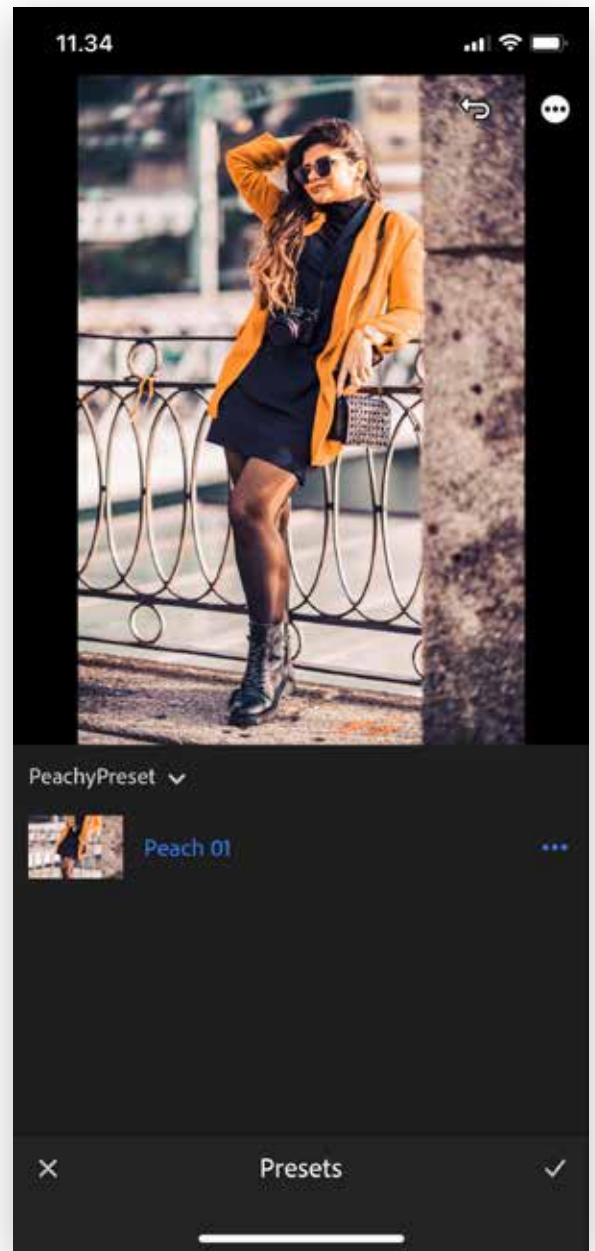

Redo steps #7 and #8 with all DNG files and fill this new preset group with all the presets.

#9 | HOW TO USE PRESETS

Import your photos to Adobe Lightroom CC or directly take new photos with it. Then choose a photo and click Presets.

#10 | FINAL PHOTO

Find your Preset Group and click the preset. Now you've successfully edited your photo with our presets!

You may finetune the presets by adding more or less exposure depending how dark your image is.
