# Metallic Liquid Soap Bottle Mockup

---

You will receive 2 version of the mockup:  
one is optimized for to insert your graphic directly on the bottle, the other one is optimized for to insert your design on the label.

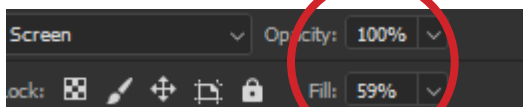

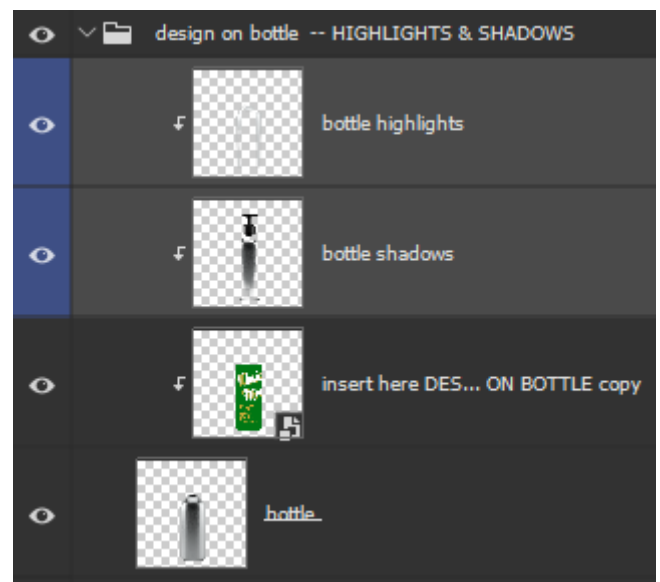

Using the files is very simple.

## GRAPHIC ON BOTTLE VERSION

**To insert your design**, just locate the layer named "insert here DESIGN ON BOTTLE", double click on it (this is a smart layer), insert your design, save close.

## HIGHLIGHTS & SHADOWS

You have full control over the highlights and shadow over the bottle. To do that, expand the layer named "design on bottle -- HIGHLIGHTS & SHADOWS". Inside you will find two blu layer. Changing the fill and opacity value, You can calibrate the impact of highlight and shadow.

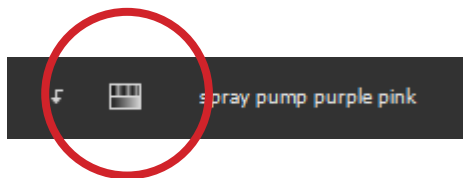

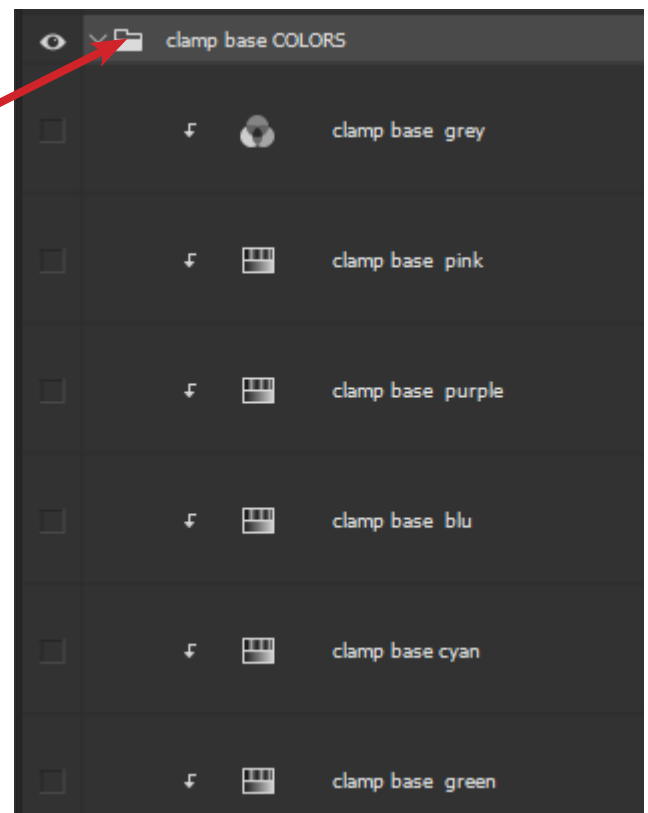

# Metallic Liquid Soap Bottle Mockup

---

You can change the color of any visible part of the spray bottle. All you need to do is to locate the right layer. (You will find several colors already set).

For example, to change the clamp base COLORS, locate and expand the layer named "clamp base COLORS". Inside you will find several colors already set... just pick your color...

If the color is not in the list, you can click on the icon and use hue / saturation panel to find it.

You can do the same to change color for any other part.

# Metallic Liquid Soap Bottle Mockup

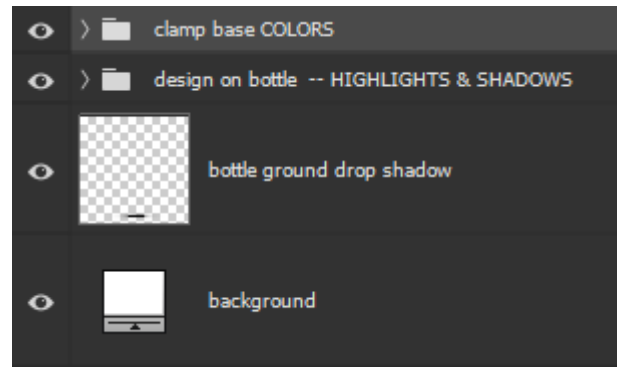

---

## BACKGROUND

You can use any background. To change his color, locate the layer named “background”, click on it, pick your color, close, save.

## BOTTLE GROUND DROPSHADOW

You can hide/show the bottle drop shadow. To do that, locate the layer named “bottle ground drop shadow” and click on the on “eye” icon near the the right layer name to set it ON / OFF

# Metallic Liquid Soap Bottle Mockup

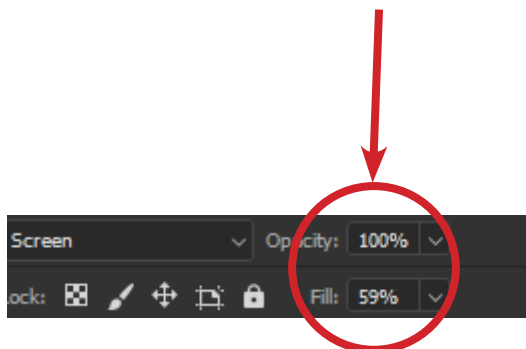

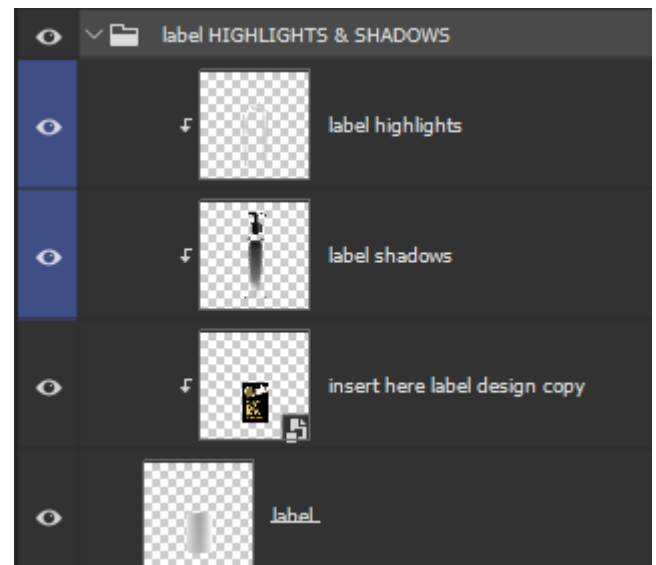

## GRAPHIC ON LABEL VERSION

**To insert your design**, just locate the layer named “insert here label design”, double click on it (this is a smart layer), insert your design, save close.

## HIGHLIGHTS & SHADOWS

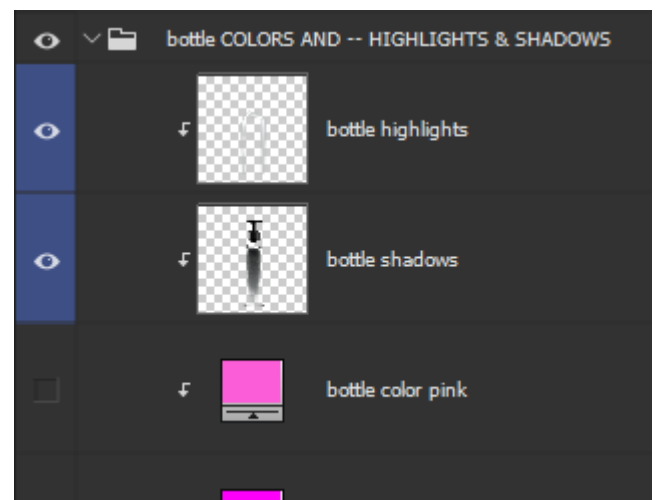

You have full control over the highlights and shadow over the bottle and over the label. To do that, expand the layer named “label HIGHLIGHTS & SHADOWS”.

Inside you will find two blue layer. Changing the fill and opacity value, You can calibrate the impact of highlight and shadow.

You can also control in the same way the highlights and shadows on the bottle. Locate and expand the layer named “bottle color”. Again you will see two blue layers that you can use to calibrate the lights. (In this group you will also find the bottle colors).

To change the color of all other parts, you can use the same instruction provided for the other version of the mockup.
