

Import Presets in all versions of Lightroom

Lightroom Classic CC

Download the .xmp file and extract it.

1. In the develop module in the presets panel within Lightroom Classic CC, click on the “+” on top of the Presets Panel and click “**Import Preset(s)**”
2. Locate the downloaded and extracted presets. Select all and click “**Import**”

This imports presets into the “**User Presets**” folder at the bottom of the Presets Panel

Lightroom CC

Download the .xmp file you receive and extract it.

1. Open Lightroom CC. Click “**Presets**” on bottom right.
 2. This will show any pre-installed presets.
 3. Click on the three dots (...) next to Presets, click “**Import Presets**”
 4. Browse to the location of downloaded presets. Select Folder and click “**Import**”
 5. Presets are imported along with folder name into Lightroom CC
