3. Download “Scandinavian Blue Mobile Presets” Zip file to your laptop.
Unzip and open folder.
4. Find folder “Scandinavian Blue Preset Files”

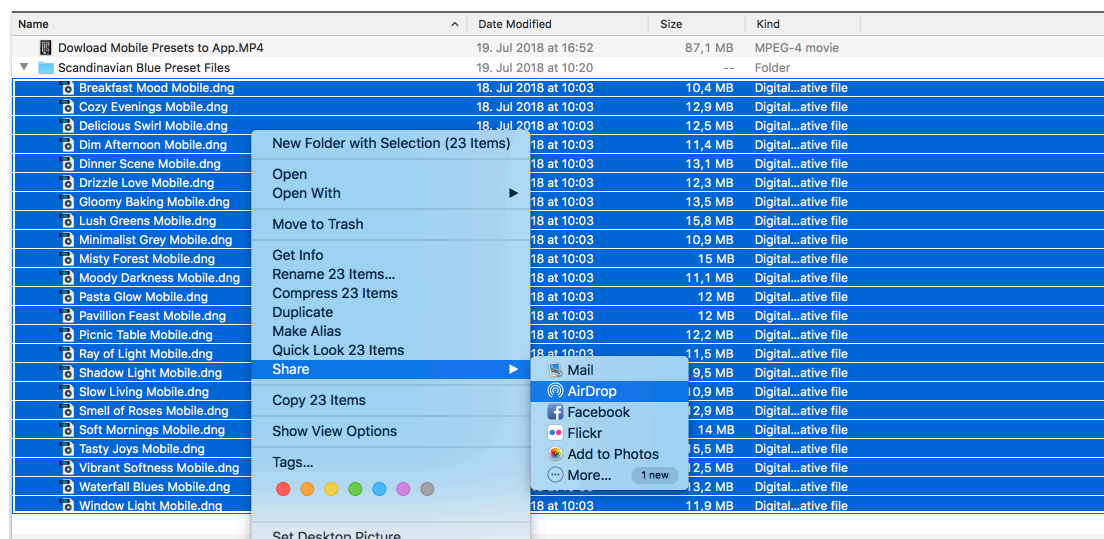

Name	Date Modified	Size	Kind
Download Mobile Presets to App.MP4	19. Jul 2018 at 16:52	87,1 MB	MPEG-4 movie
▼ Scandinavian Blue Preset Files	19. Jul 2018 at 10:20	--	Folder
Breakfast Mood Mobile.dng	18. Jul 2018 at 10:03	10,4 MB	Digital...ative file
Cozy Evenings Mobile.dng	18. Jul 2018 at 10:03	12,9 MB	Digital...ative file
Delicious Swirl Mobile.dng	18. Jul 2018 at 10:03	12,5 MB	Digital...ative file

5. There are two options now:

- a. Select all dng files and share them via AirDrop with your mobile phone. The preset files will be saved into your photo folder / camera roll on your mobile phone.

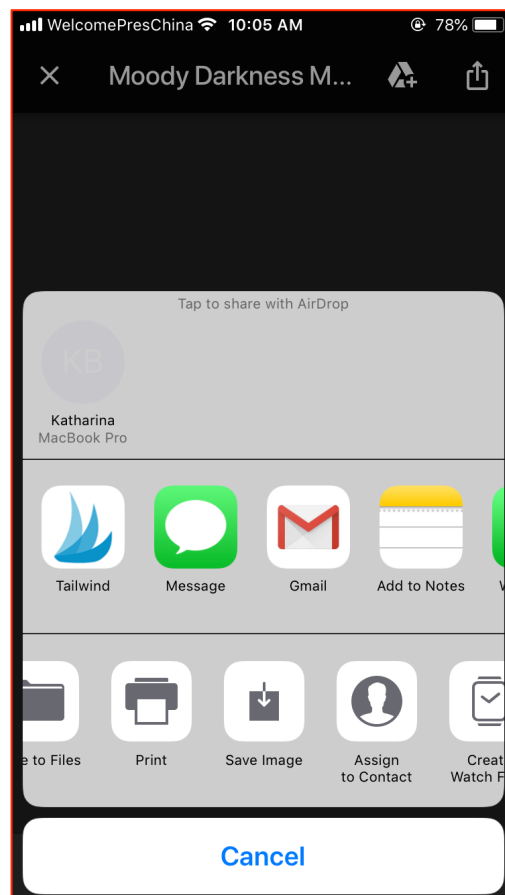

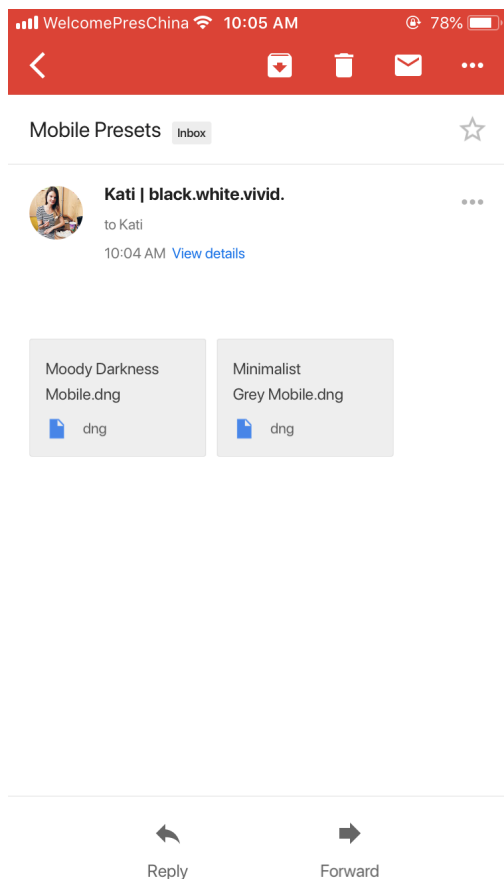

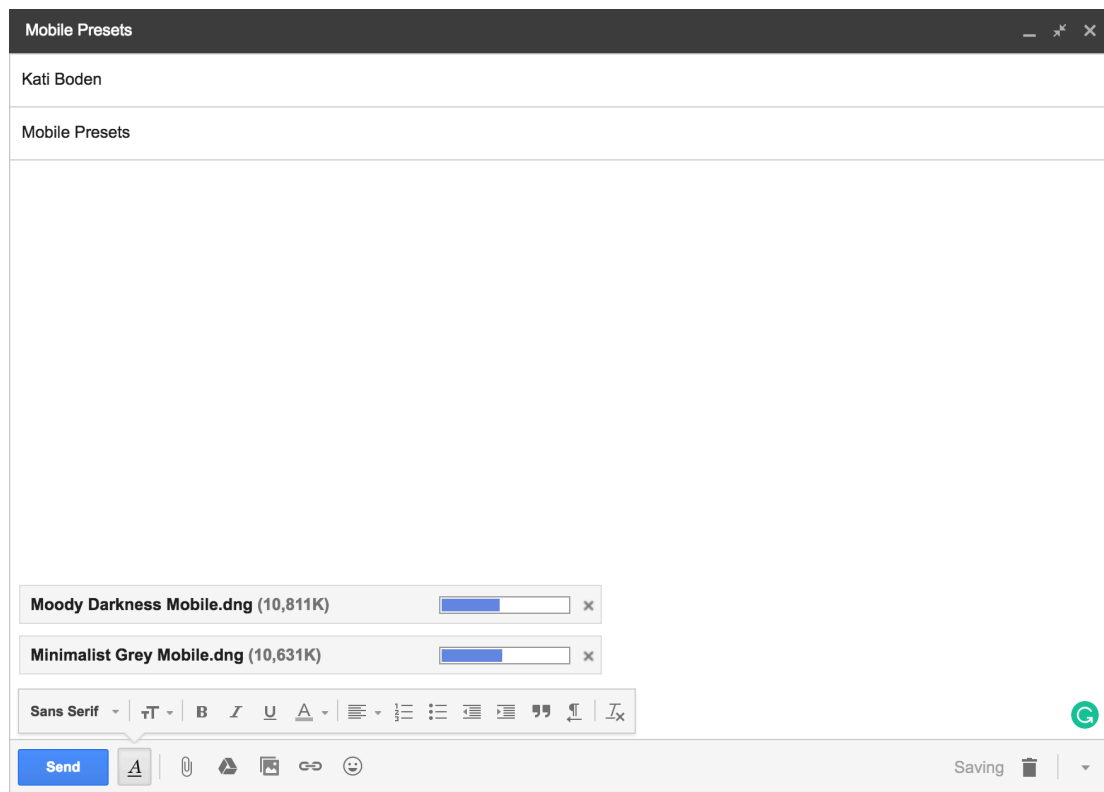

* a. Either select all dng files and then go to the 'share' symbol and click on "AirDrop" or...

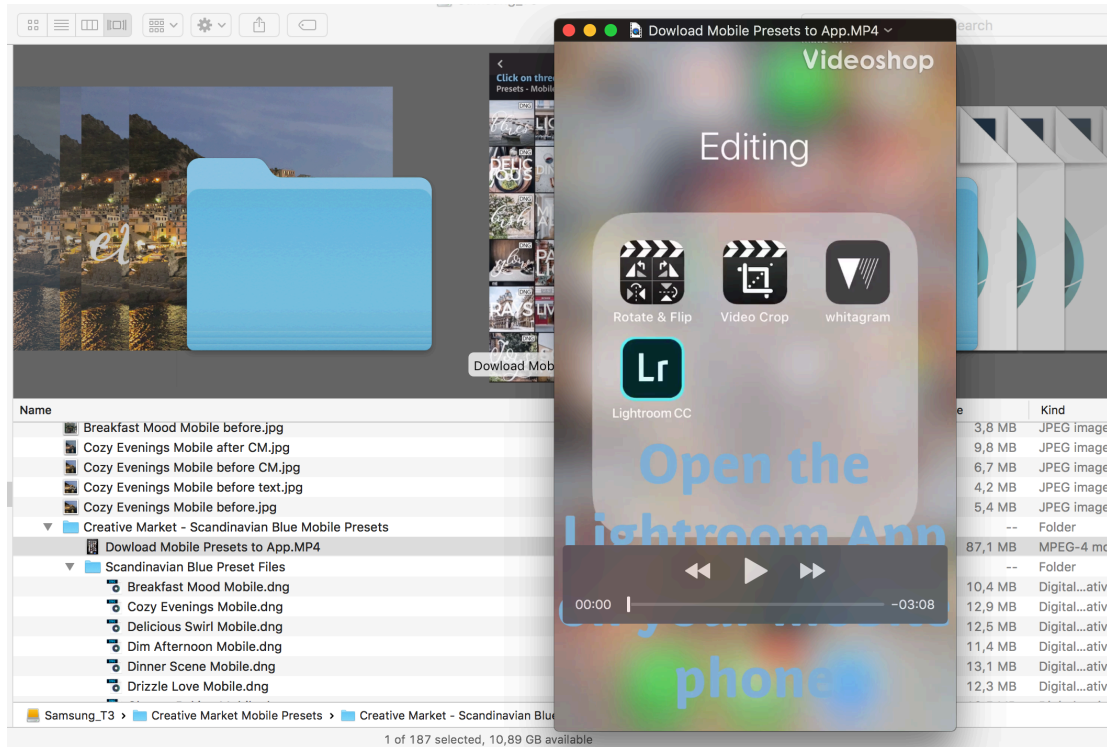

* ... select all dng files, right click and go to "Share" on the menu and click on "AirDrop".

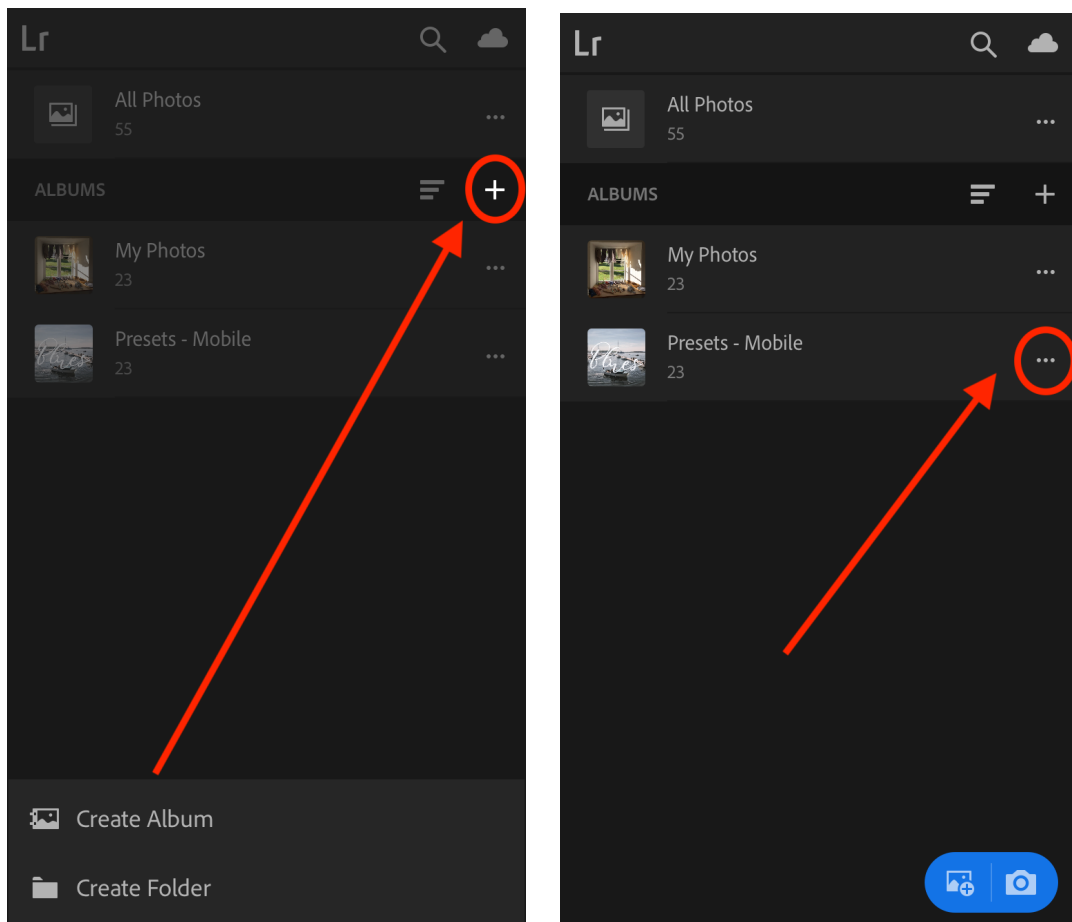

- b. Send all dng files via email to your mobile email account. Open preset file on your mobile phone and choose “Save image”

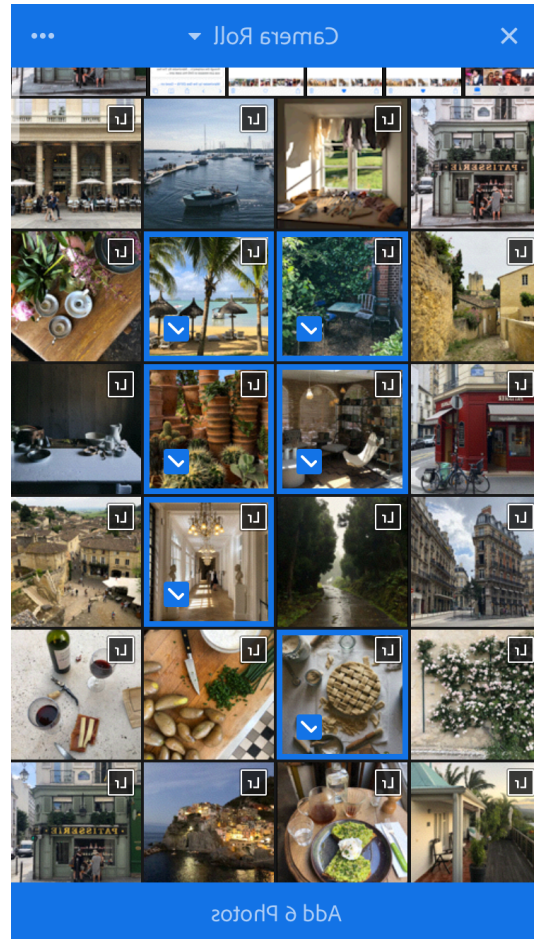

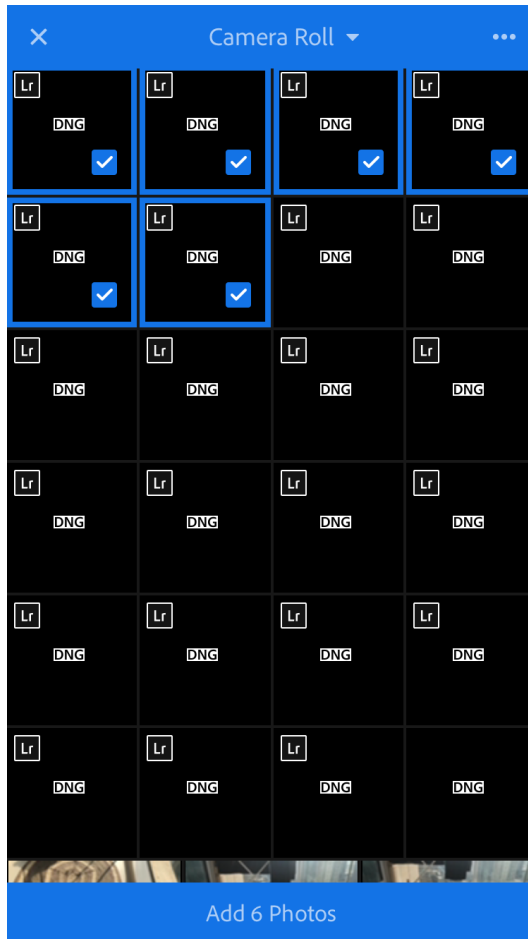

6. You can now watch the video “Download Mobile Preset App” or continue following the steps on this guide.

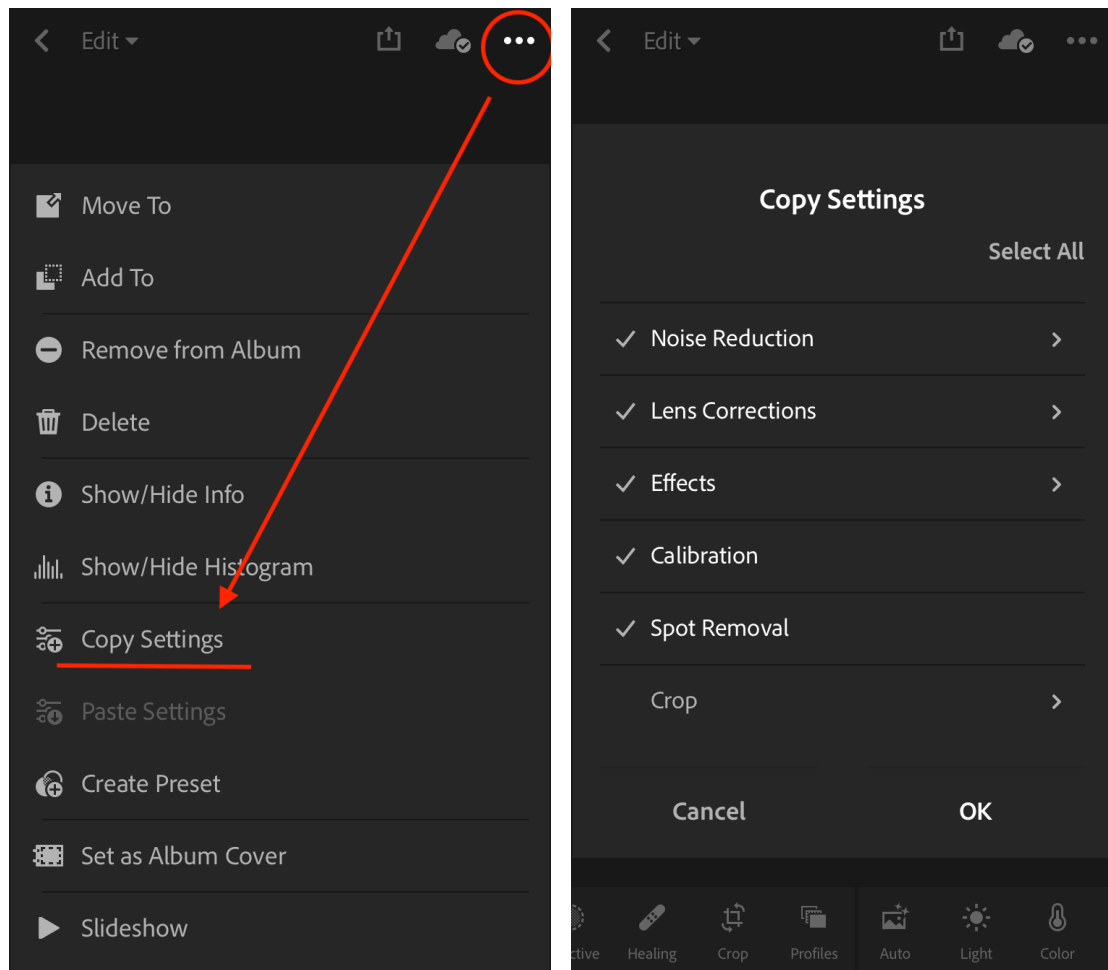

7. Open the “Lightroom CC App”. On the main/home screen find the plus (+) symbol, press it and create two albums. One for your photos and one for your mobile presets. I called mine “My photos” and “Presets-Mobile”

8. Go to your presets folder and click on the three dots (...), select "Add Photos" > "Camera Roll" and select all or a few of the dng images (preset files) you just saved to your mobile phone. Add files.
9. Do the same for the photos you want to edit. Go to your photos folder, click on the three dots (...), select "Add Photos" > "Camera Roll" and select all photos that you'd like to edit in the Lightroom App.

10. Now go to the folder where you saved all the presets. You want to copy the settings from the preset of your choosing. Open preset image by pressing on it and copy settings by clicking on the three dots again. Scroll down to the bottom of the settings list and deselect "Crop". Click on "OK"

11. Inside the Lightroom App go to your photos folder and choose a photo that you'd like to edit with the preset that you just copied. Open photo by pressing on it and apply preset by clicking on the three dots again (...) and then "Paste Settings".
