

Instruction

How to use our presets for Lightroom mobile

01. Download the .ZIP file after your purchase on CreativeMarket. You can also access your downloads by clicking on the "View Content" link in the confirmation email from CreativeMarket.
02. Open the Lightroom application on your phone and select an image from your library and press to open it.
03. Slide the toolbar to the bottom to the right and press the "Presets" tab. Press the three dots to open the menu and select "Import Presets".
04. Your file explorer appears on the screen. Navigate to the folder on your phone where you downloaded the .ZIP file and press the .ZIP file to import the presets. (If you cannot import the .ZIP file directly, use the "My Files" app on your phone to extract the contents of the .ZIP file first.)
05. Your presets will now be imported and will be available under a new group in the "Presets" tab.
