

CITYTURTLES PRESETS

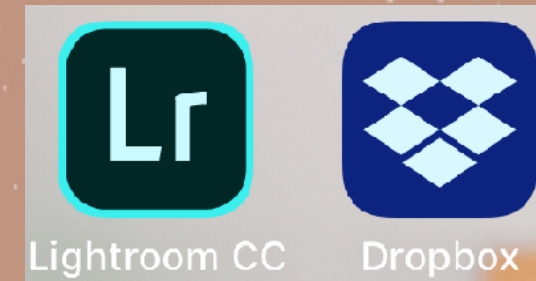

LIGHTROOM MOBILE INSTALLATION GUIDE

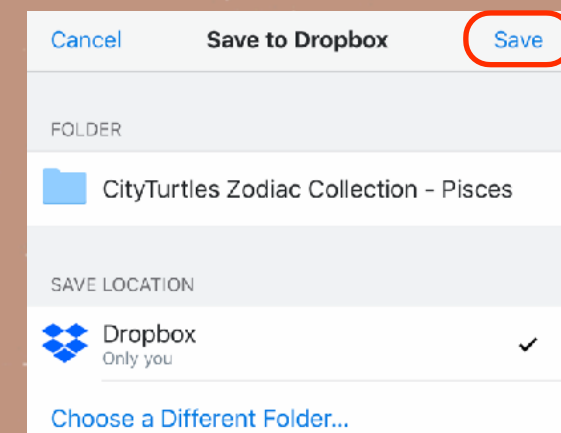

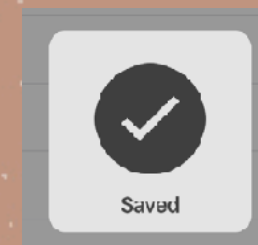

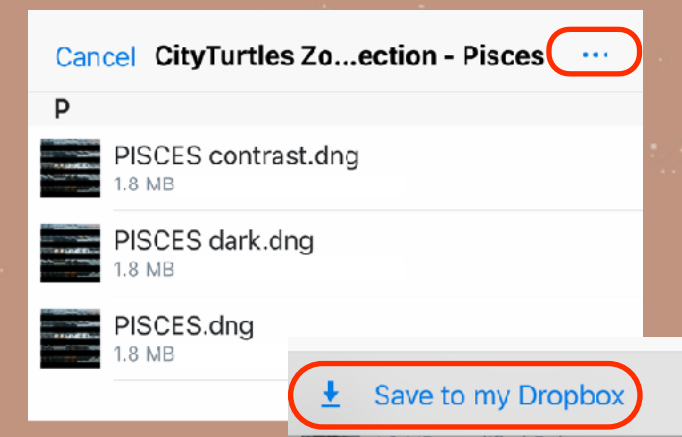

HOW TO INSTALL

Thank you for purchasing my presets! I poured my heart and soul into these presets and created this user-friendly guide to teach you the ins and outs of mobile presets. I hope you enjoy using them on your images!

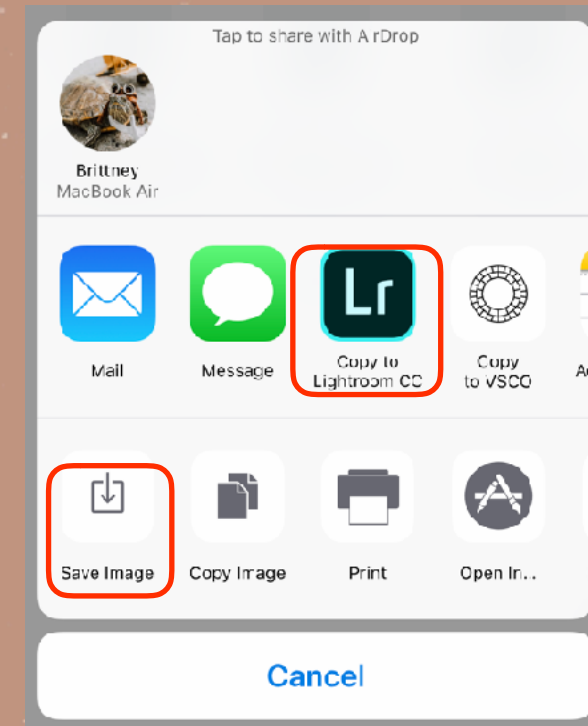

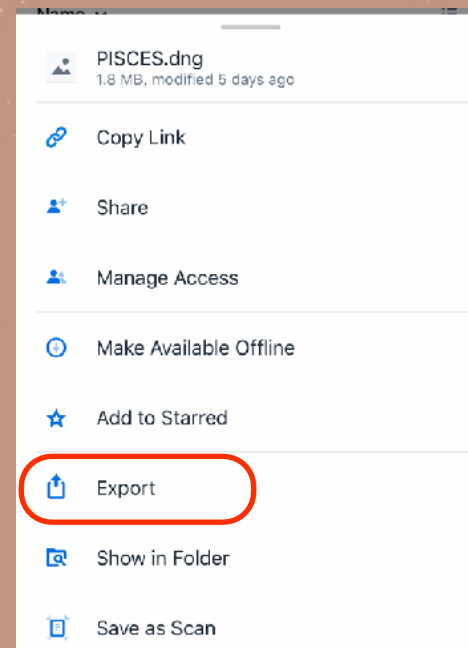

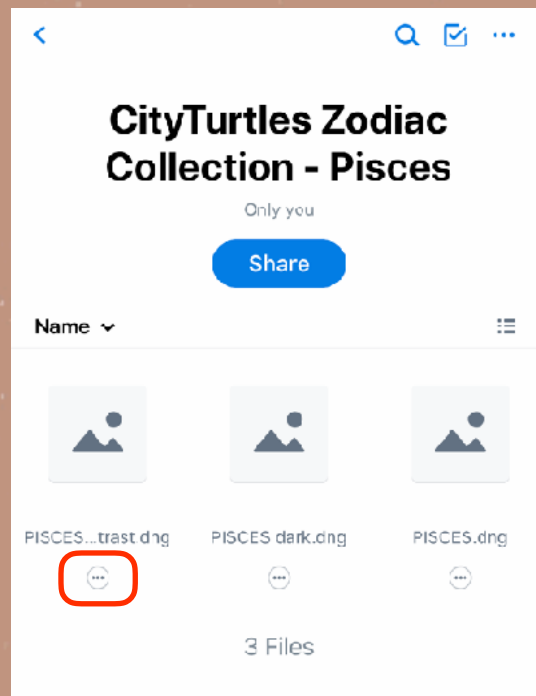

1.) **Download** the Lightroom CC app and Dropbox app on your phone and create a free account if you haven't already.

2.) **Open** the Dropbox download link located in the PDF file you received from Etsy after your purchase. If the link opens on your internet browser, make sure you open the folder in the app. Press the ... button on the top right corner then press **Save to my Dropbox**. Choose a location and click **Save**.

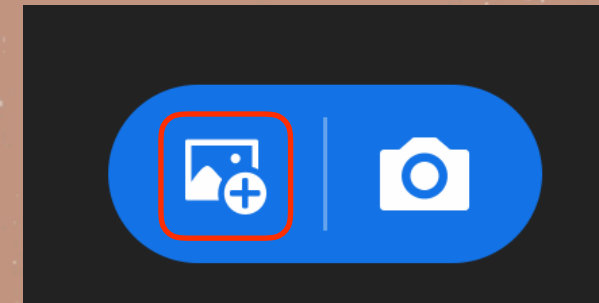

HOW TO INSTALL

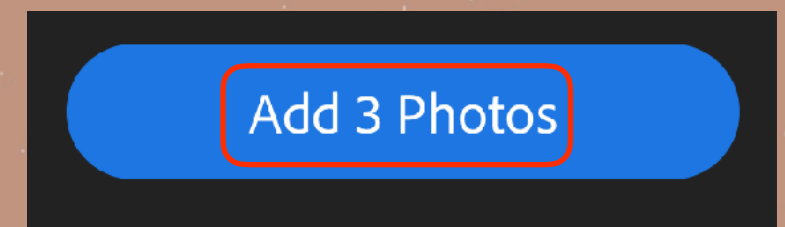

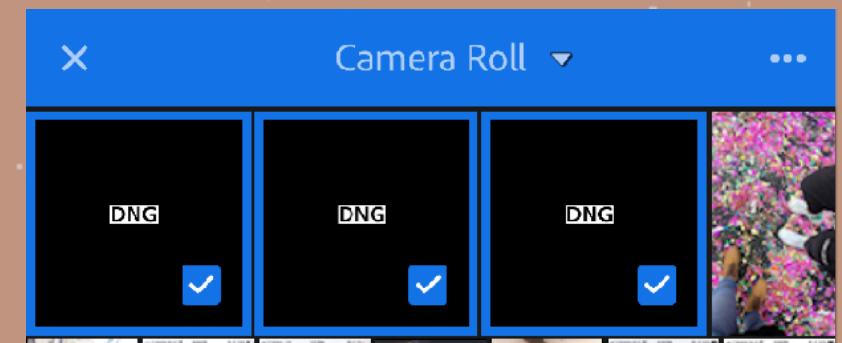

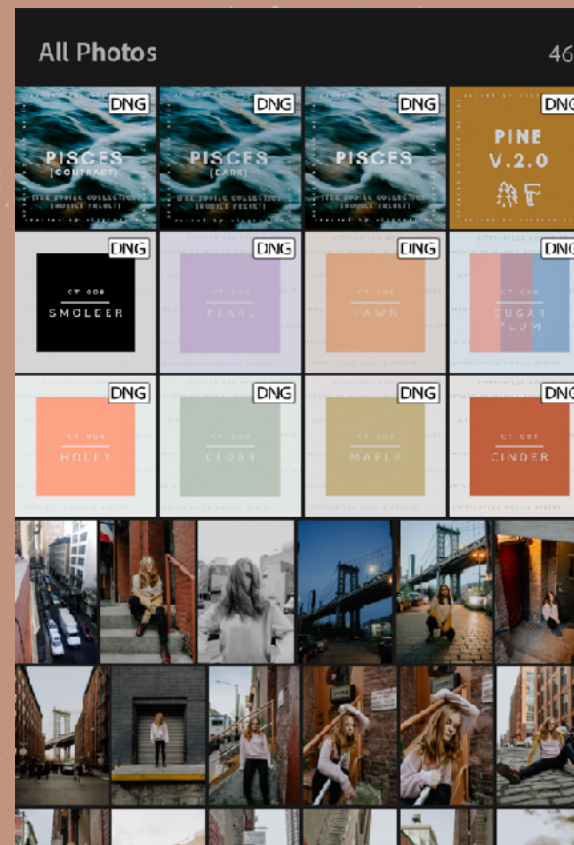

3.) Go to your files and open the folder you just saved and press the •• button under each DNG file. Click **Export**. You'll see a pop up menu with a few different options. Press **Copy to Lightroom CC** which will take you straight to Lightroom. If this option doesn't appear for you, press **Save Image**. The DNGs will be saved to your photos and will look like blank images which is completely normal.

HOW TO INSTALL

4.) (If you saved them to your photos) **Open** up the Lightroom app and **upload** the presets the same way you upload regular photos. Click the + photo icon. Hold down on a preset and press Select to quickly select all of them. Click **Add Photos**. When the DNGs have finished uploading, your presets are now ready for use!

Optional: Create an album called CityTurtles Presets and import all of the presets into the album so that it can be organized and you can find them again easily.

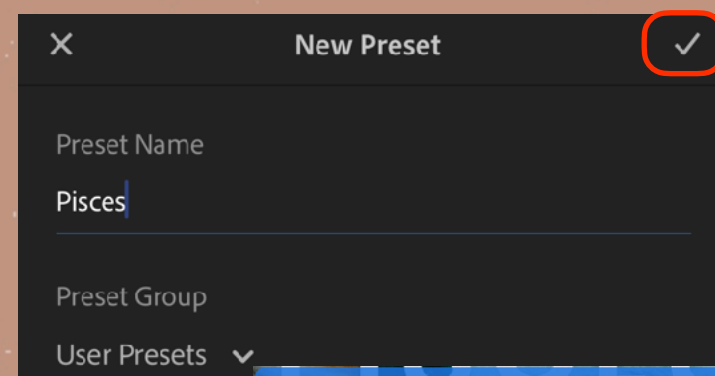

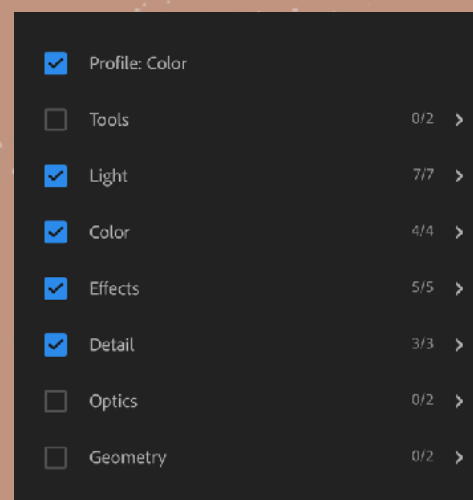

HOW TO USE

Now that you've installed the presets to Lightroom, it's finally time to learn how to apply them on your images!

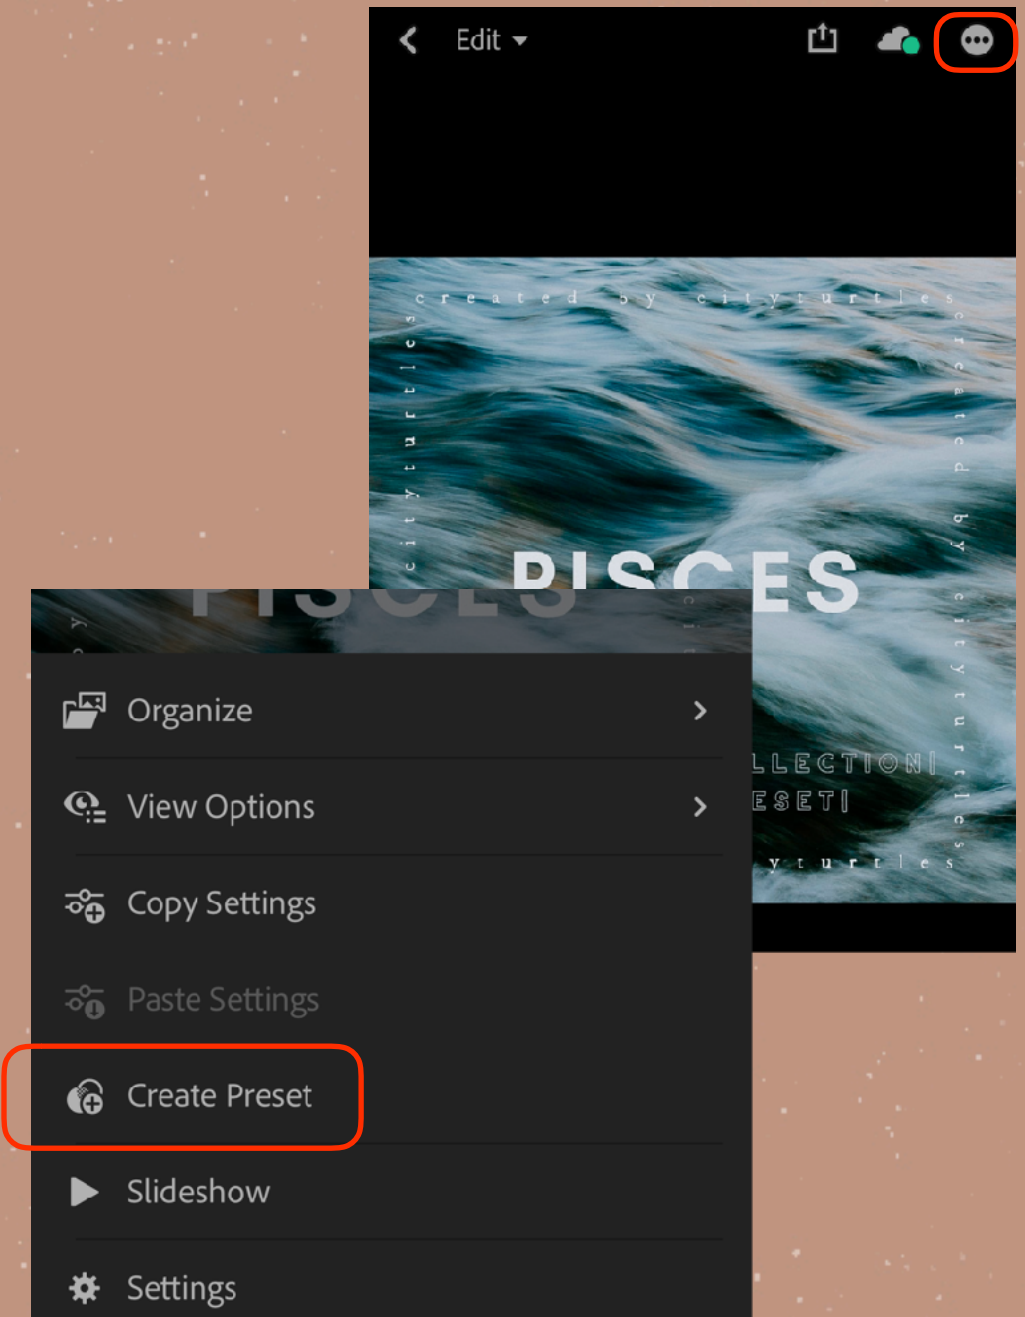

1.) **Upload** the photo(s) you want to edit if you haven't already.

2.) **Open** the DNG you want to use. Click ⋯ on the top right corner and press **Create Preset**.

3.) **Name** the preset and press ✓. (Don't worry about the settings, the ones you need will automatically be checked for you.) **Repeat** until you have saved all of the presets.

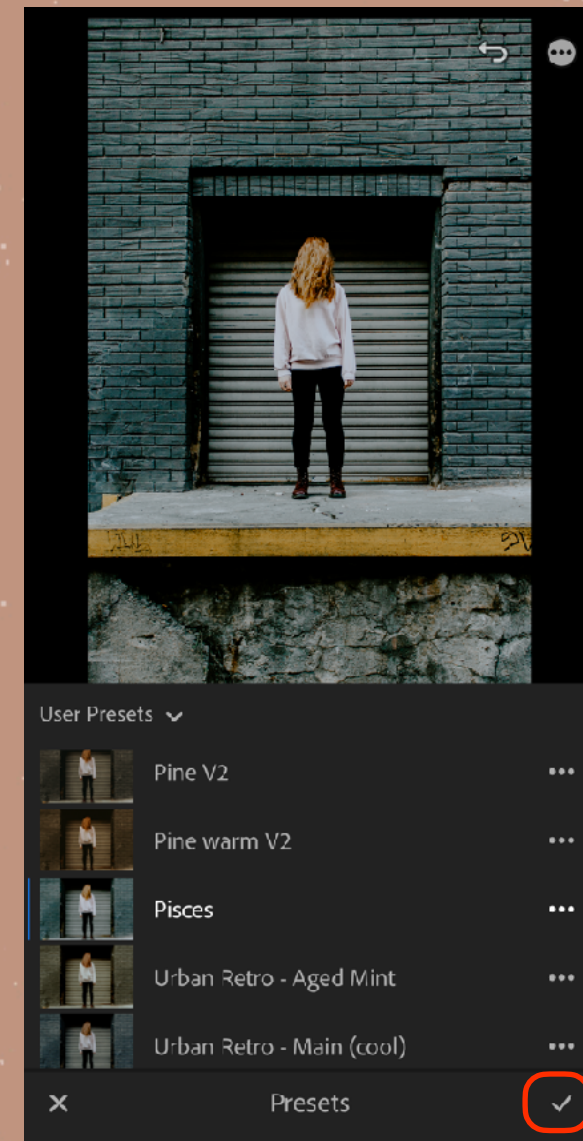

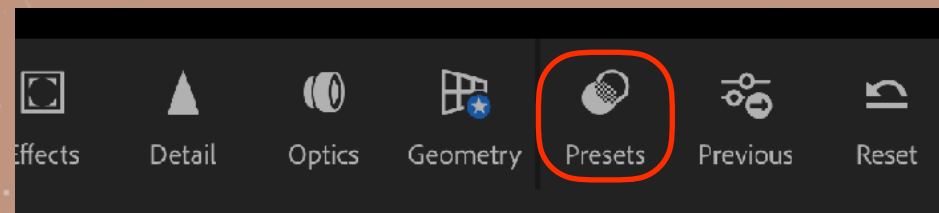

"Pisces" added to "User Presets"

HOW TO USE

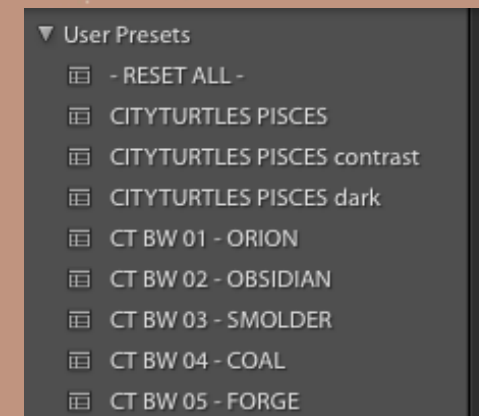

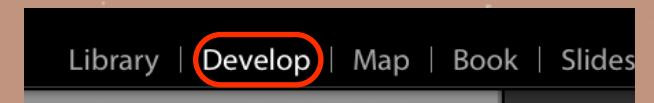

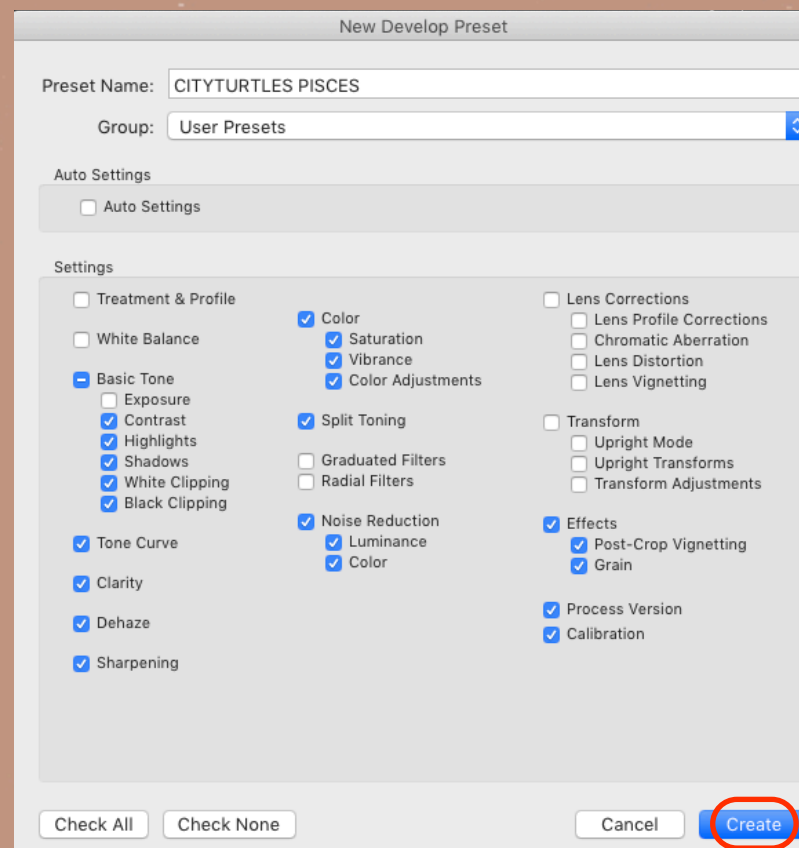

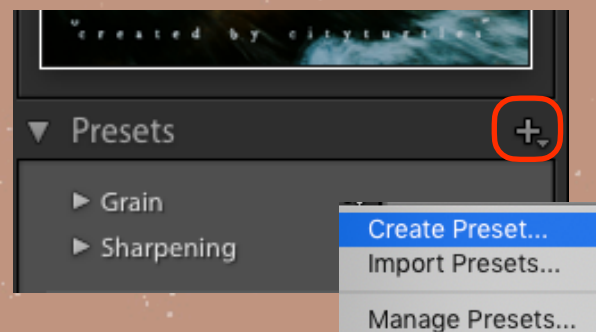

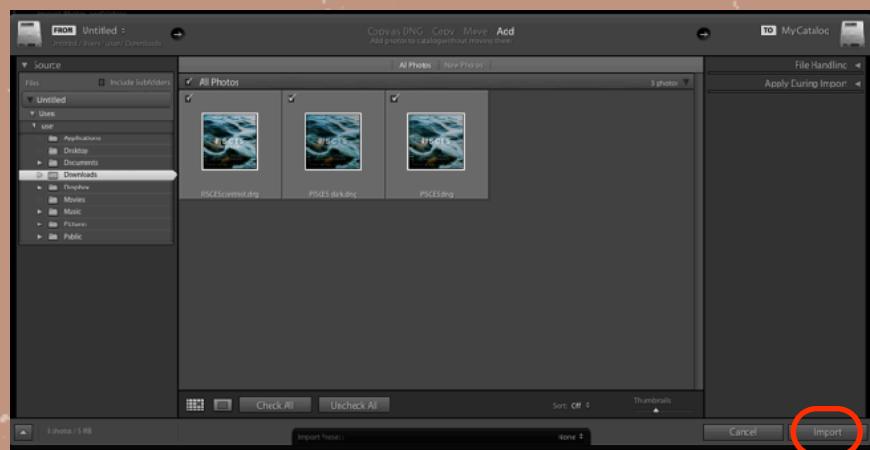

4.) **Exit** out of the DNG and go to the photo you want to edit. Scroll left on the bottom panel and click on the **Presets** tab. This is where you'll find all of the presets you've just saved. Choose the preset you want to use then click ✓. Feel free to adjust exposure, white balance, etc to better suit your image. You're done! Woohoo!

TIPS & TRICKS

- **Easily convert mobile presets to desktop presets**

If you have Lightroom installed on your desktop, you can still use the mobile presets to edit!

All you have to do is go to the **Library** module, **import/drag** the DNGs into Lightroom, switch to **Develop** module, select a DNG file, click + next to Presets, press **Create Preset**, give it a name, check the boxes shown above, and hit **Create**. The preset should now be saved in your User Presets folder and is ready to be used!
