

## **HOW TO UNZIP / INSTALL ON IPHONE**

- Make sure your iOS is updated to version 11 or later
- You will receive a download link via email (in the rare case you don't receive the link contact us and we will send them to you right away). To download just copy the link and paste it in your browser. Opening the link by clicking on it may not always work
- Download the .ZIP file with .DNG files inside
- Your files will open via the "Files Application"
- Click "Access File Content" button in the right bottom corner to find the .DNG files
- Find the .DNG files (Adobe RAW Image)
- Open it with Lightroom CC app
- Scroll right until you see Lightroom CC
- Click the three dots
- Select "Create Preset"
- Name the preset and click the check-mark to save it (save it in "User Presets: Preset Group")
- To apply the preset open a photo and select the preset icon

## **HOW TO UNZIP / INSTALL ON ANDROID**

- Make sure your mobile device has Android 8 or later installed
- You will receive a download link via email (in the rare case you don't receive the link contact us and we will send them to you right away). To download just copy the link and paste it in your browser. Opening the link by clicking on it may not always work
- Press Download Now
- Download .ZIP file with .DNG files inside and press to open it
- Press Extract button (if you don't have this option, just open the .ZIP file you downloaded)
- Select all .DNG files and press Share
- Find your Adobe Lightroom CC app and select it
- If you don't have the option to open .DNG files directly with Adobe Lightroom just save .DNG files to your mobile, open Adobe Lightroom and add them like a regular photo and continue
- Open Lightroom and find your .DNG files
- Choose a .DNG file and click on the three dots in the right corner and choose "Create Preset"
- Name your preset
- Find "Presets" section in the main Lightroom menu and then find your preset in the "User

Presets" section

- To apply the preset open a photo and select the preset icon

## **HOW TO INSTALL DESKTOP PRESETS**

- After download save the preset archive on a handy location, like Desktop
- Unzip all the files into a folder (ex. Gym and Fitness - Desktop Presets)
- This folder should have all the .XMP files that represents the preset files
- Open Lightroom
- Go To: Edit - Preferences - Presets
- Click On "Show Lightroom Develop Presets"
- In the window that appears, enter the Settings subfolder
- Copy the unzipped folder 'Gym and Fitness - Desktop Presets' in the Settings subfolder
- Restart Lightroom
