

How to install Lightroom Presets

Desktop

Since Lightroom CC 2018, you can install Lightroom presets (xmp files) straight from the plus sign under the Presets dialogue when you are in the Develop Module in Lightroom.

However, if you're using an older version of the software, you should follow the following steps.

- Open Lightroom
- Look for "Edit" (PC) or "Lightroom" (Mac) in your menu > Preferences > Presets
- Click on the box titled: Show Lightroom Presets Folder
- Double click on Lightroom
- Double click on Develop Presets
- Copy the folder(s) of your presets into the Develop Presets folder
- Restart Lightroom

Mobile

- Unzip the files on desktop or phone
- Save the presets (.dng files) from your desktop on a cloud storage (like dropbox)
- Access the files from your mobile phone
- Open the Lightroom Mobile App
- Click on the (...) Setting options in the top-right corner of the app.
- Choose "add photos" option
- Select the dng files
- Click on the newly imported file, then click on the three dots "(...)" setting options.
- Choose "Create Preset" from the menu that appears.
- Give your preset a name. We recommend to type the same name as we picked
- Do these same steps for each DNG/preset file.
