how to install

SUPERHERO DESIGN

LIGHTROOM PRESETS

STEP 1: UNZIP THE FILES

The first thing you will need to do is unzip the folder of presets that you downloaded. On a PC, right-click on the zipped folder and choose "Extract All" from the menu of options. On a Mac, double-click the file and Mac's unzipping utility does the rest.

STEP 2: SAVE THE PRESETS

If you unzipped the presets on your computer, you will need to save the preset files to your favorite cloud storage option, so you can access them on your mobile phone. You will also need to be able to allow access to those files on your phone through that same cloud storage app. If you unzipped the preset download on your phone, you can skip this step.

STEP 3: OPEN THE LIGHTROOM MOBILE CC APP

Just open your Lightroom app. Once it's open, you can add the DNG/Preset files (next step).

STEP 4: ADD THE DNG/PRESET FILES

To add a preset, click on the (...) Settings option in the top-right corner of the app.Choose the Add Photos option. On the next screen, choose the location you will be pulling your DNG/Preset files from. If you have saved them to your phone, choose "From Camera Roll". If you have saved them to a cloud storage option, choose "From Files". Select the DNG/Preset files you would like to import. This step may be a little different depending on your mobile phone, however most phones offer a way to select multiple files/images.

STEP 5: CREATE LIGHTROOM PRESETS FROM THE DNG FILES

Click on one of the imported files, then click on the three dots inside a circle in the upper right-hand corner of the screen. From there, choose "Create Preset" from the menu that appears. Give your preset a name. Do these same steps for each DNG/preset file.

USING YOUR NEW PRESETS

Select an image in the Lightroom Mobile App that you would like to edit. Swipe left on the bottom options until you see "Presets" and tap on that option. It will open with your most recently used preset collection. By tapping on the collection name, you can choose the new collection you just installed. Click through the presets until you find the one you like. When you are finished adding your preset, click the check mark in the lower right corner.

NOTE: My presets will not change your exposure or white balance, since those settings can vary with each image. I encourage you to make those adjustments as necessary before or after choosing your preset. Enjoy!
