

Export Presets As DNG

You can't import xmp presets to LR mobile directly. You have to have subscription or free trial for LR CC on desktop, import the preset(s) to LR CC on desktop and then sync those over to mobile LR.

If this doesn't work for you, you'll have to apply the preset to a .dng raw file, move the file to your phone, import it to mobile LR and then create a preset from the .dng.

Export Presets As DNG For Lightroom Mobile

First step - you install my presets to your Desktop Lr, then you need to apply preset to any file (every preset step by step) and then - export as DNG to your computer:

Click on File -> Export with Preset -> Export to DNG

Select where you want the files to be exported.

NOTE: If you don't see this option, you most likely don't have the right version of Lightroom installed. Make sure you have [Lightroom Classic CC](#) (not Lightroom CC) and make sure your version is up to date.
