## Presets

Hello and thank you so much for purchasing my presets! I've poured my heart, mind, body, and soul into these presets and I wanted to create this user-friendly guide to help you learn the ins and outs of mobile presets. I hope you enjoy using them on your photos!

If you're an insta addict like me, use the hashtag [#cityturtlespresets](#) on your photos so I can see your beautiful images! Now let's get started on the guide:

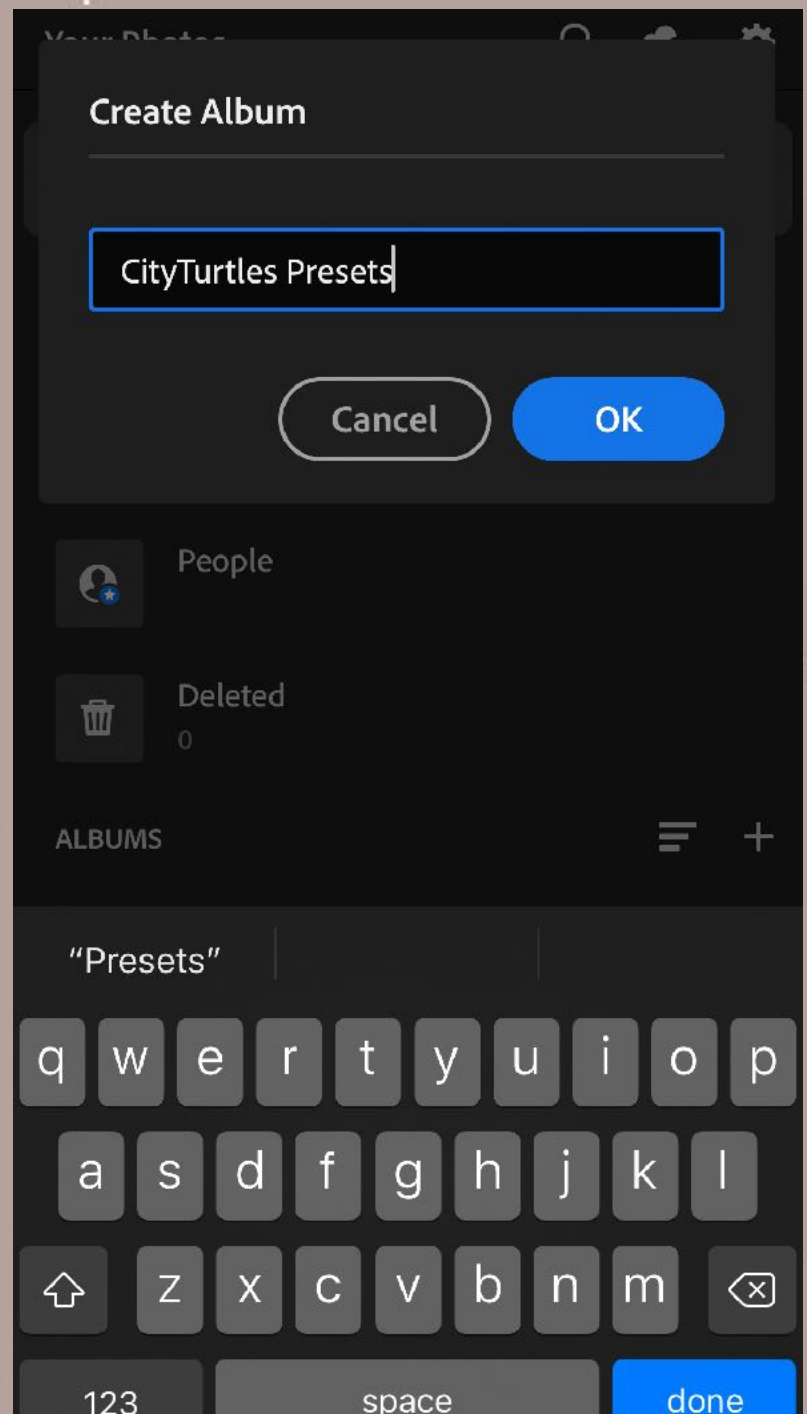

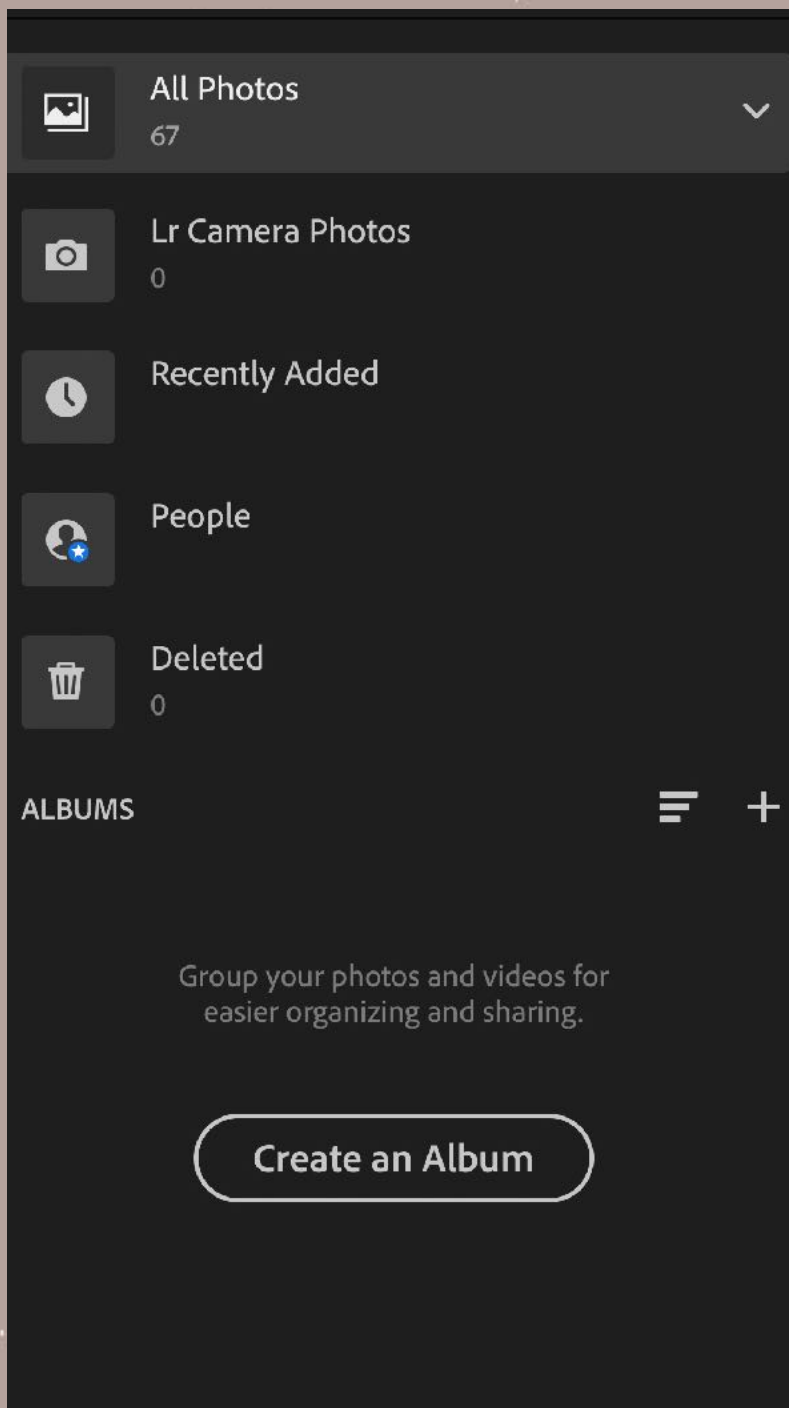

Step 1: Save all of the DNG files to your photos. They will look like blank images which is completely normal!

cityturtles.etsy.com

Step 2: Open up your Lightroom app. Click 'Create an Album' and name it. This will help you organize your presets if you have a lot of photos!

Step 3: Import the DNG files from your camera roll into the new album you've just created. If you see "Unable to Preview" on the DNG file, ignore this and continue importing.

Step 4: After they have finished importing, it's now time to save the presets into your app! Open one of the DNG files. Click the ●●● button on the top right corner.

Step 5: Press 'Create Preset' and give it a name! Don't worry about the settings, the ones you need will automatically be checked for you. Press the check mark at the top right when you've finished. Repeat until you have saved all of the presets.

Step 6: Now for the fun part! Go to the photo you want to edit and scroll left on the bottom panel to the 'Presets' icon. You'll find all the presets you've just saved here. Click on the preset you want to use, press the check mark, and you're done!
