

PIXEL MOSHPIT.

HEAVY  
METAL

EDITABLE CHROME LAYER EFFECTS FOR LIVE TEXT

**THANK YOU FROM MY FAMILY AND !!** Your purchase may seem inconsequential but is a giant help to keep our little family business afloat, food on the table and the lights on.

For that we are incredibly grateful you chose our products to spend your hard earned money on... seriously, thanks!

# HOW TO INSTALL

1. Unzip the file you receive after purchase.
2. Import the **.afstyles** file, located in the “Styles” directory (folder), into the “Styles” studio (panel) in **Affinity Photo/Designer/Publisher** by clicking the studio’s drop down menu in the top right corner, select “Import Styles Category...” and choose the downloaded **.afstyles** file.
3. Import the **.afassets** file, located in the “Assets” directory (folder), into the “Assets” studio (panel) in **Affinity Photo/Designer/Publisher** by clicking the studio’s drop down menu in the top right corner, select “Import Assets” and choose the downloaded **.afassets** file.
4. Open the file named “Pixel Moshpit - Heavy Metal Gradient Maps.afphoto” in the **Gradient Maps** directory. Contained in the layers are groups, each group has a name and contains a **Gradient Map** adjustment layer. Double click the thumbnail of the **Gradient Adjustment** layer to bring up it’s settings, in the new pop-up dialog, select “Add Preset” and then choose a name (I created suggested names for each group) to save it to the **Gradient Map** section of the **Adjustment studio**.

Sorry, installing Gradient Maps has to be this way until Affinity allows for the import and export of Gradient Map Presets. =(
