Here's some errors that you'll get with the plugin and here's the solutions, but if you get any other errors, please contact us, see the Support Page.

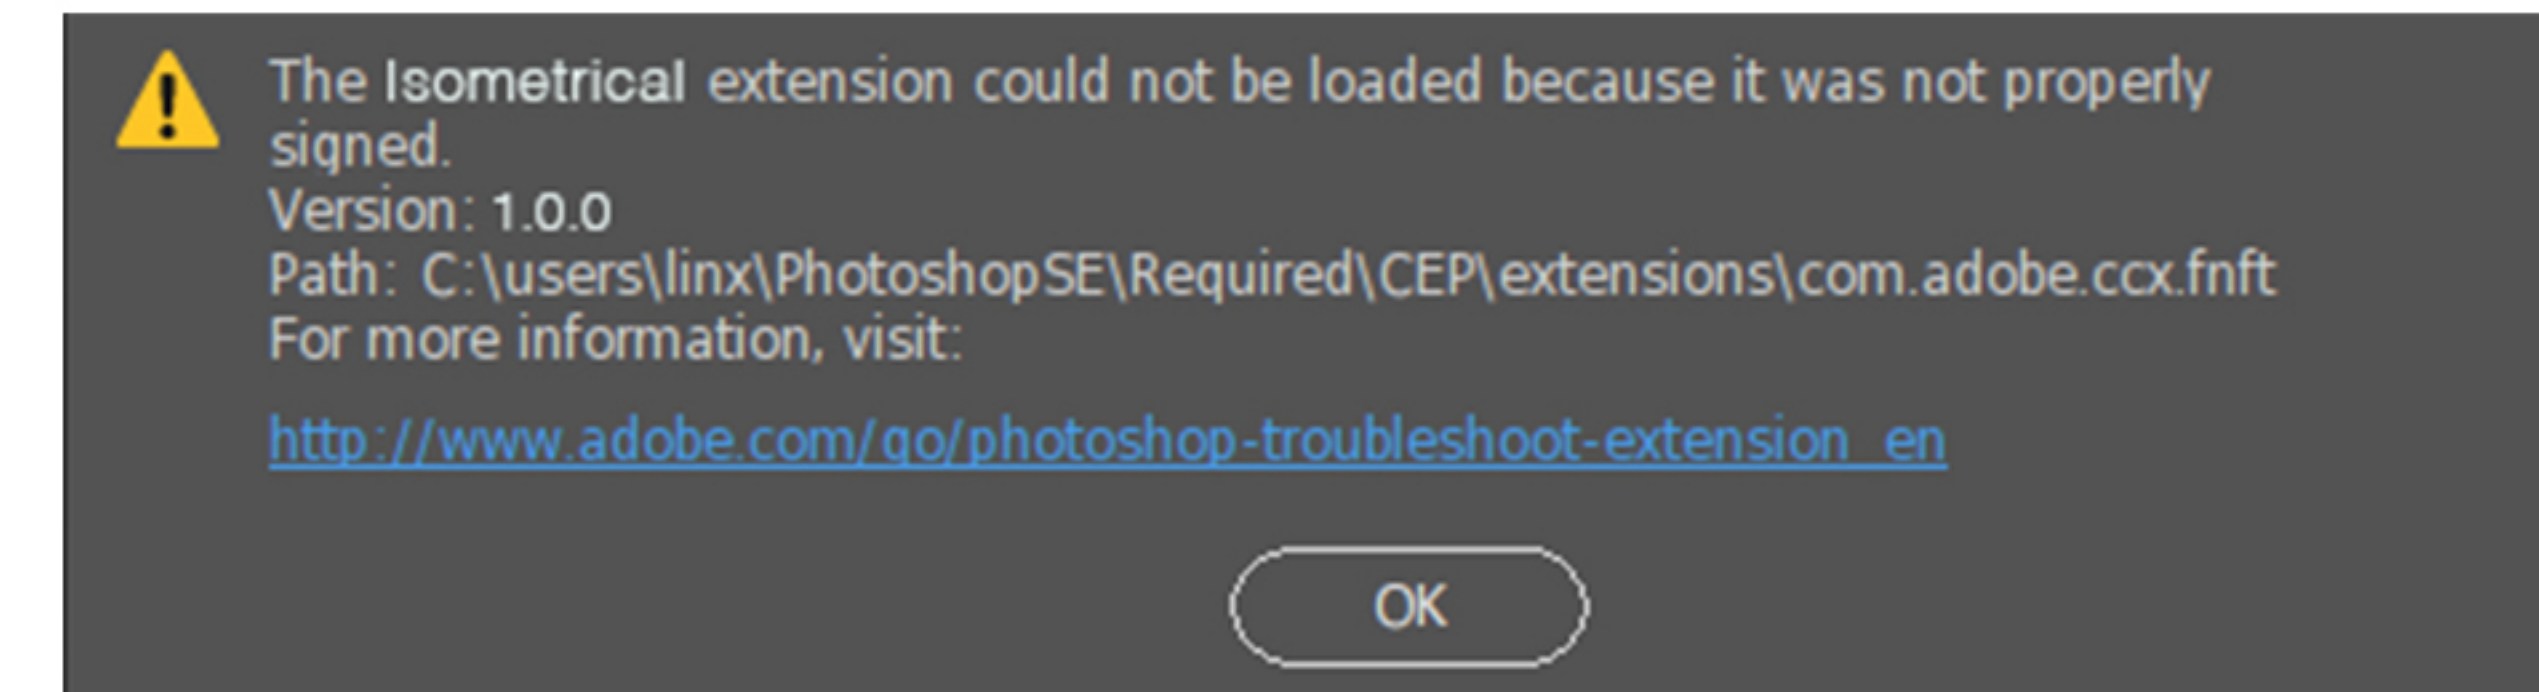

Error 01: The Isometrical extension could not be loaded because it was not properly signed.

This error shows up after the installation and when you try to open the plugin, and that error shows up because of 02 things:

- Reason 01: If you make a changes inside the plugin folder or delete any of its files, and that will destroy the signature, in this case adobe asked you to sign in your plugin.
- Reason 02: If you try to install the plugin in wrong photoshop version, and that makes your photoshop doesn't know the plugin anymore.

Error 01 - How to fix 01:

lets fix that error, first of all you've to make sure that you try to install the plugin in photoshop **CC2015.5, CC2017, CC2018, CC2019, CC2020 or CC2021**. then make sure to do not make any changes inside the plugin folder or delete any of the plugin files, also don't edit inside the **installer.jsx** file, if you already do that mistake, you can fix the problem by re downloading the plugin from here: <https://graphicriver.net/downloads>. and re install it again in the right photoshop version (**CC2015.5 - CC2021**) and without any editing inside the files.

Error 01 - How to fix 02:

This solution is the best for the developers, but you can do it also even if you don't know about development, just follow the instructions below carefully:

First thing you need to know is the version of “*com.adobe.CSXS.X*” of your photoshop version, and you can do that by discovering the right version from the list below:

- *com.adobe.CSXS.10 = Photoshop CC2021*
- *com.adobe.CSXS.9 = Photoshop CC2020*
- *com.adobe.CSXS.9 = Photoshop CC2019*
- *com.adobe.CSXS.8 = Photoshop CC2018*
- *com.adobe.CSXS.7 = Photoshop CC2015.5 to Photoshop CC2017*

Then create your “*com.adobe.CSXS.X*” version by replacing “*X*” with your PS version, then lets apply it.

For MAC Users:

01. Open TERMINAL (search for it inside Spotlight).
02. Put the following code line inside it:
defaults write com.adobe.CSXS.X PlayerDebugMode 1
and replace “*com.adobe.CSXS.X*”, with your version that you get above and press enter.
03. Restart your photoshop (better to restart your machine).
04. Good Job, Enjoy!

For WINDOWS Users:

01. Open REGEDIT (search for it inside Search Bar).
02. Put the following code line inside it:
HKEY_CURRENT_USER/Software/Adobe/CSXS.X PlayerDebugMode 1
and replace “*CSXS.X*”, with your version that you get above and press enter.
03. Restart your photoshop (better to restart your machine).
04. Good Job, Enjoy!

Error 02: You look like you've selected a background layer.

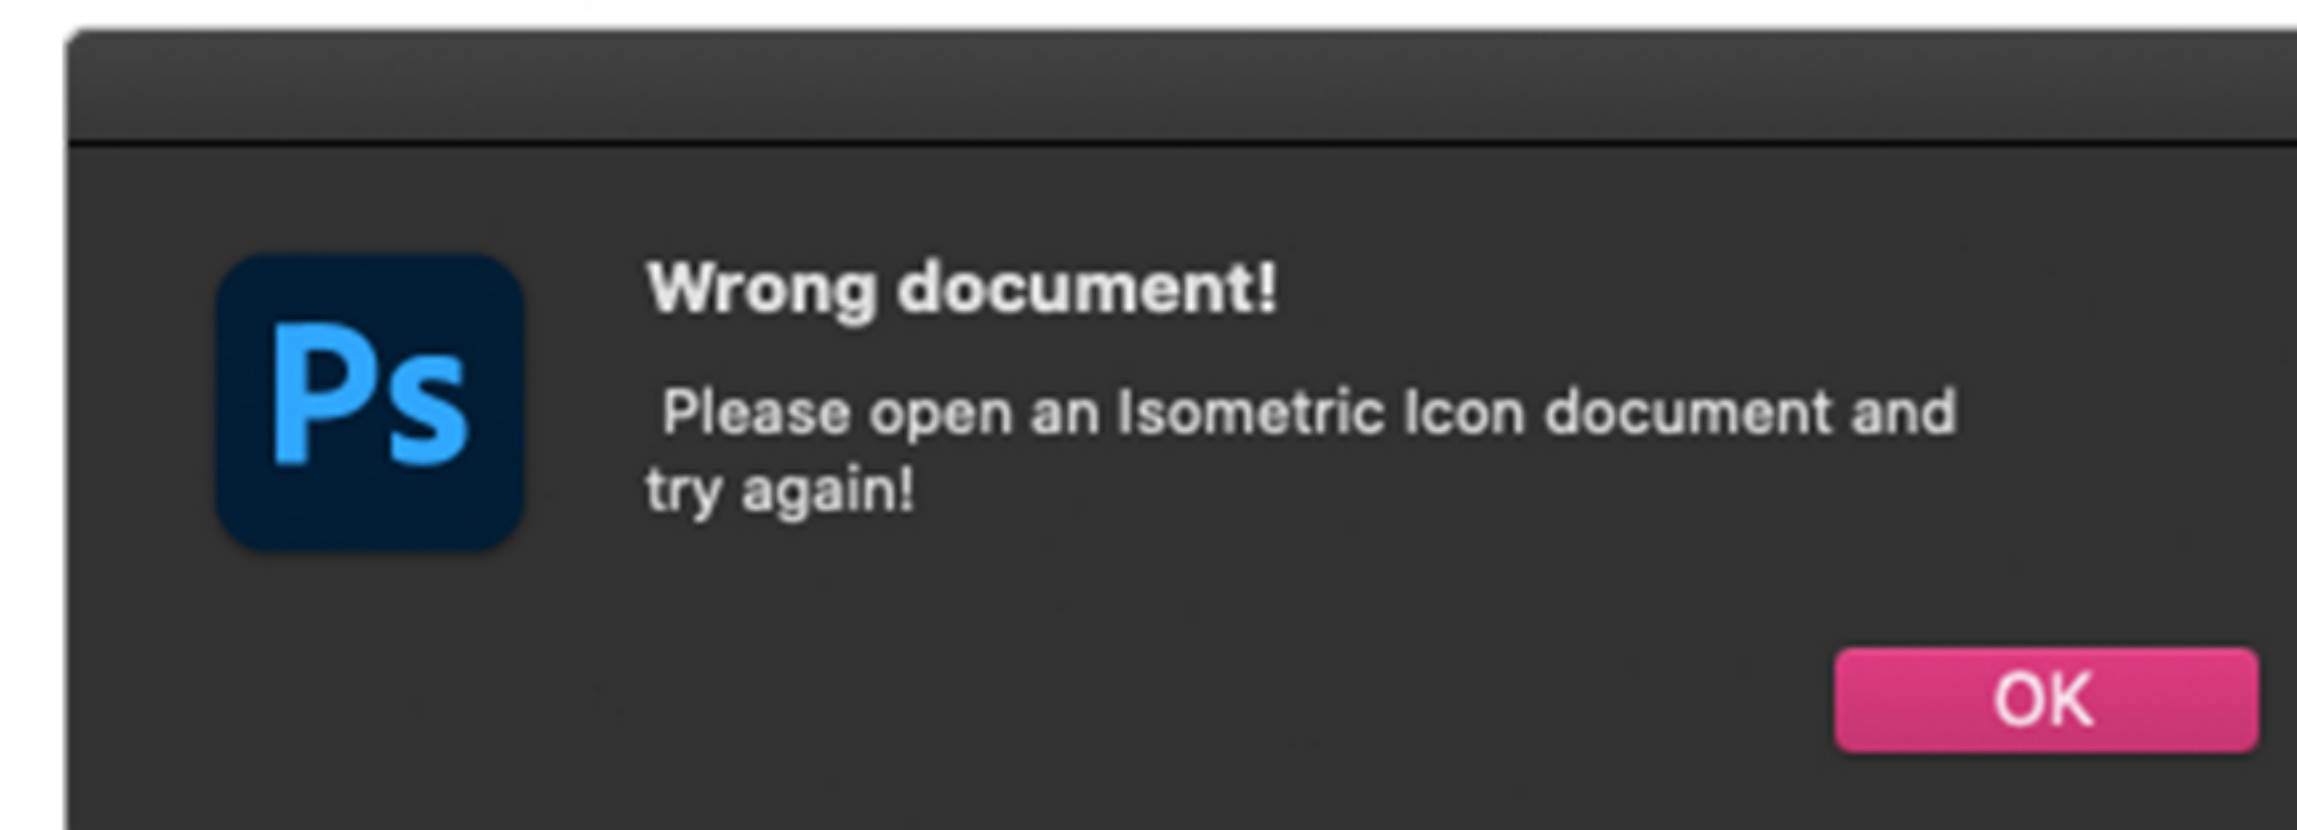

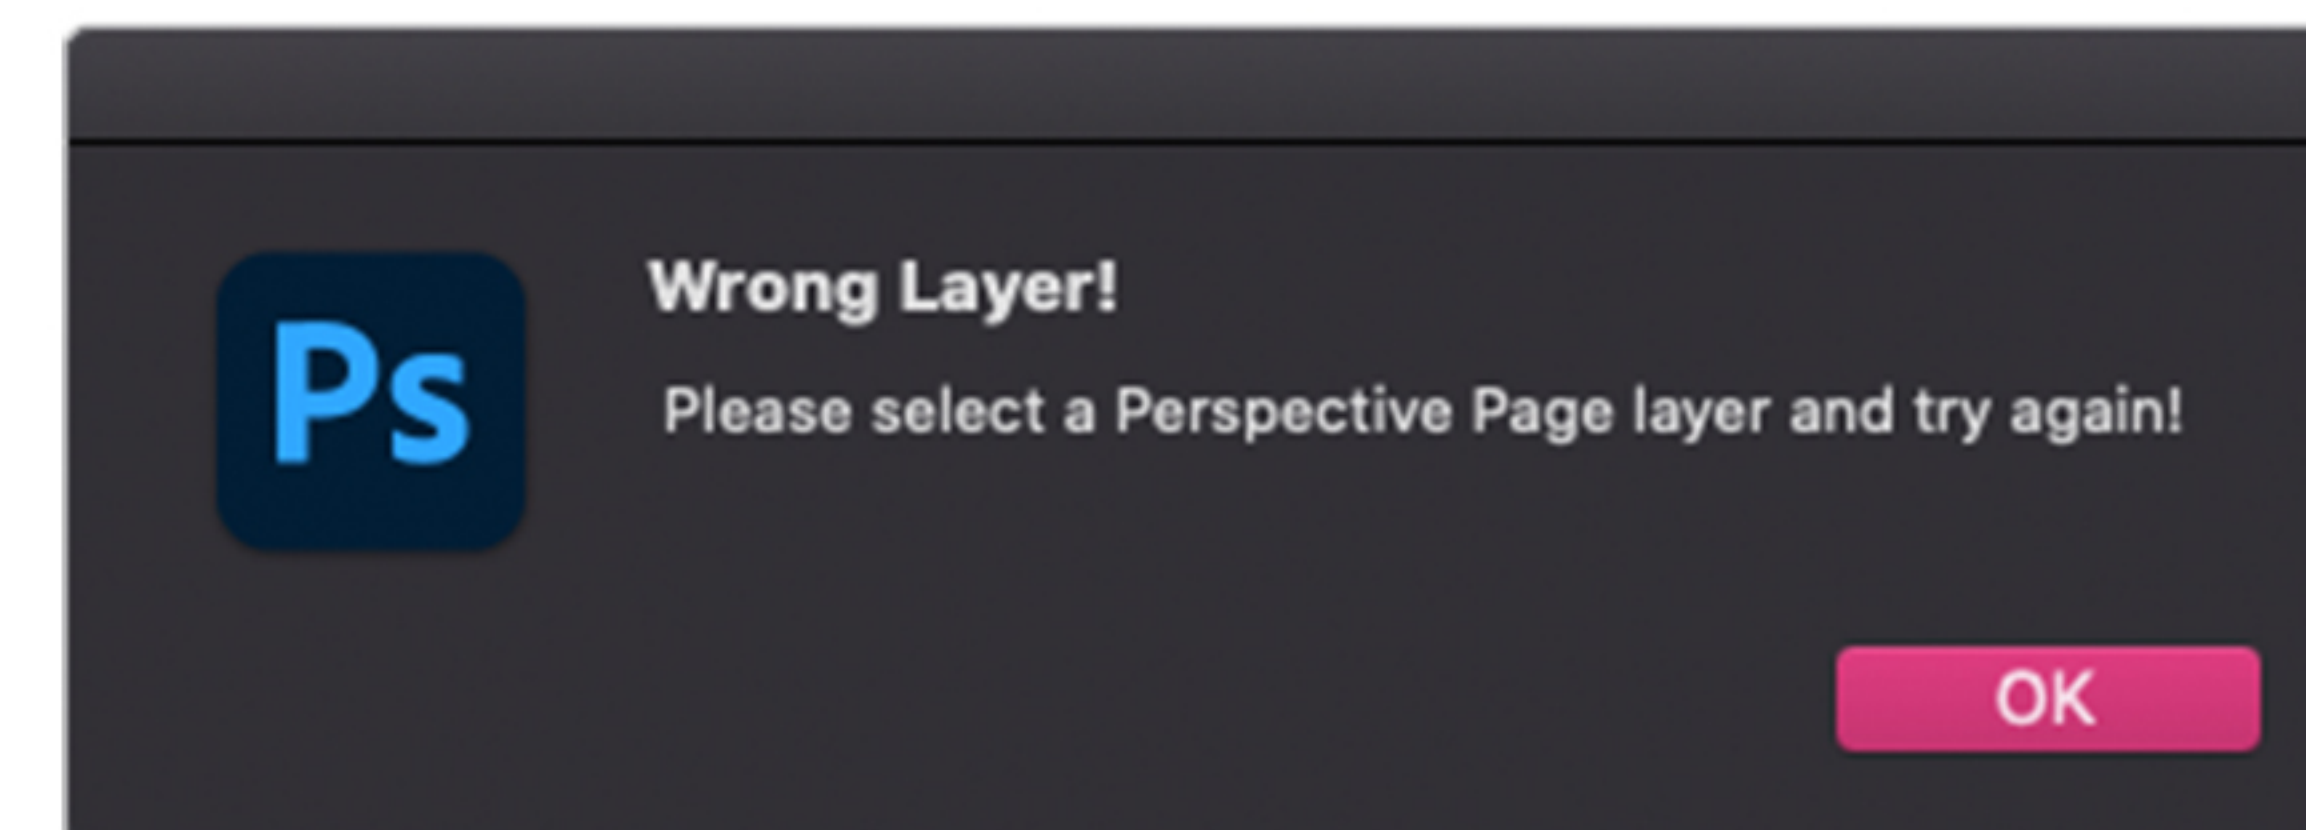

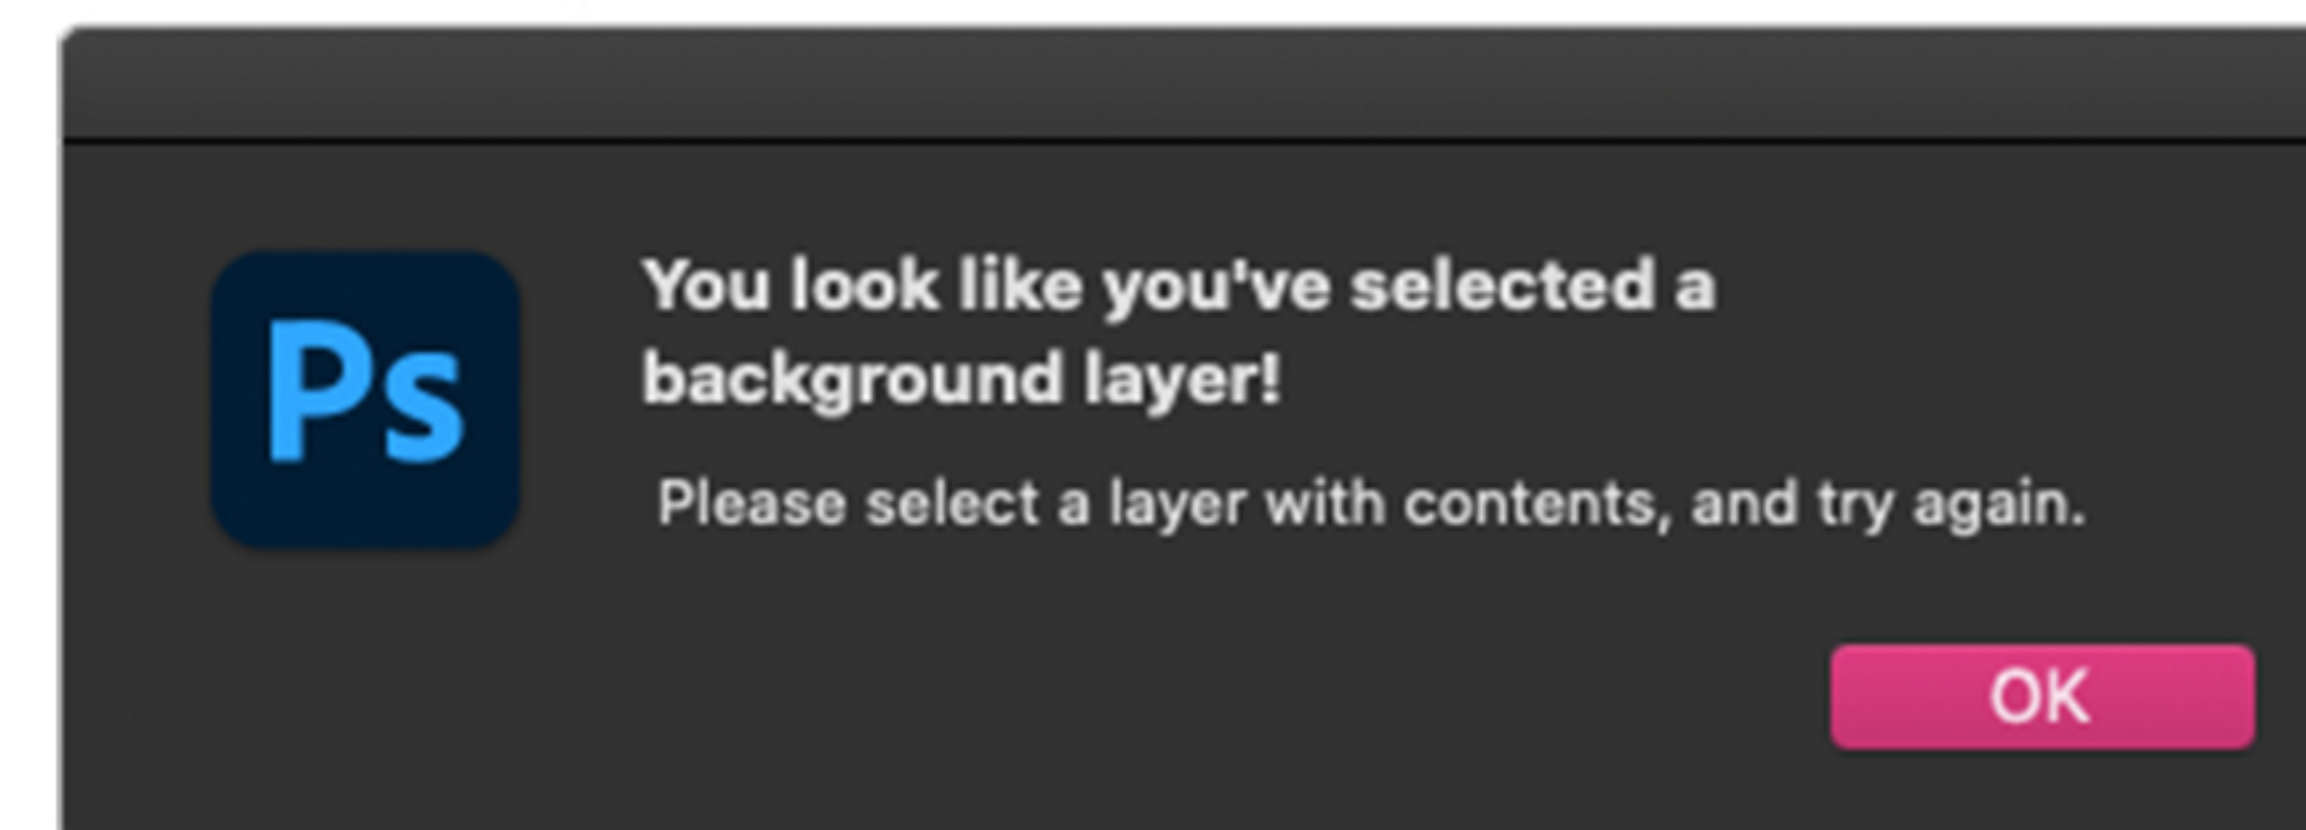

This error shows up when you try to apply an effect on a background layer, and to fix that just select any other layer with contents and try to apply the effect again.

Error 03: Wrong Layer - Select Perspective Page.

This error shows up when you try to apply an effect on a layer that not contains the perspective page effect, make sure to select the right layer before apply any effect that related to the perspective page.

Error 04: Wrong Document.

This error show up when you try to apply an effect on a document that doesn't contain the isometric icon effect, make sure you are in the document with the name: *Isometric Icon - Right/Left/Front*, and apply the related effect with the Isometric Icon.

Otherwise if you have any other problem, contact us at the support page, we will be in touch with you as fast as we can.

Uninstall The Plugin

To uninstall the plugin, you've 02 options, you can do it automatically by using the plugin itself, and sometimes with some photoshop versions, this option failed, so you need to do it manually, lets see the both options:

Automatically Uninstall:

Launch the plugin and go to settings page, then click on **Uninstall button**, the plugin will ask you to confirm that operation, click on **YES**, and restart your photoshop to complete the uninstall operation.

Manually Uninstall:

Quit your photoshop, and navigate to this path in your system files:

- For MAC Users: **Only This Path:** */Users/<username>/Library/Application Support/Adobe/CEP/extensions/*
- For WINDOWS: **User Path:** *C:\Users\<username>\AppData\Roaming\Adobe\CEP\extensions*
System Path: *C:\Program Files (x86)\Common Files\Adobe\CEP\extensions*

Search for a folder with that name: “ **net.oxygenart.isometrical** ” and delete it, then open your photoshop normally and you'll not get the plugin again.
