

HELP GUIDE

Installation Guide for Lightroom Mobile app (iPhone / iOS 13)

Please make sure you have the latest version of the app installed

- 01/ After your download then unzip the folder, Now you'll see a folder name **"Summer Love Presets for Iphone"**.
Input this folder into your phone.
- 02 / Open the Lightroom Mobile app on your iPhone. Click the "+" icon in your library and choose to create new **"Folder"**. Name the new folder **"Presets"** and open the folder. Press **"Create New Album"** and name the album.
- 03 / Open the album and press the **"Add"** icon in order to add new images. Navigate to the folder you input and select all DNG files in the folder. When you have selected all, choose **"Open"**.
- 04 / Open the first DNG image and press the icon with the three dots to open the menu and select **"Create Preset"**.
- 05 / Name your preset after the preset pack. In **"Preset Group"**, select **"Create New Preset Group"** and name it after the name of the preset pack. Press the tick to create the preset.
- 06 / Follow the same method as in create your presets from the other DNG files.
- 07 / When you are finished, you will now find the presets under the **"Presets"** panel.
